# Opinion Summarization

# Outline

1. How to build opinion summarization system without training pairs
2. How to make it more comparable between entities

# Outline

1. How to build opinion summarization system without training pairs
2. How to make it more comparable between entities

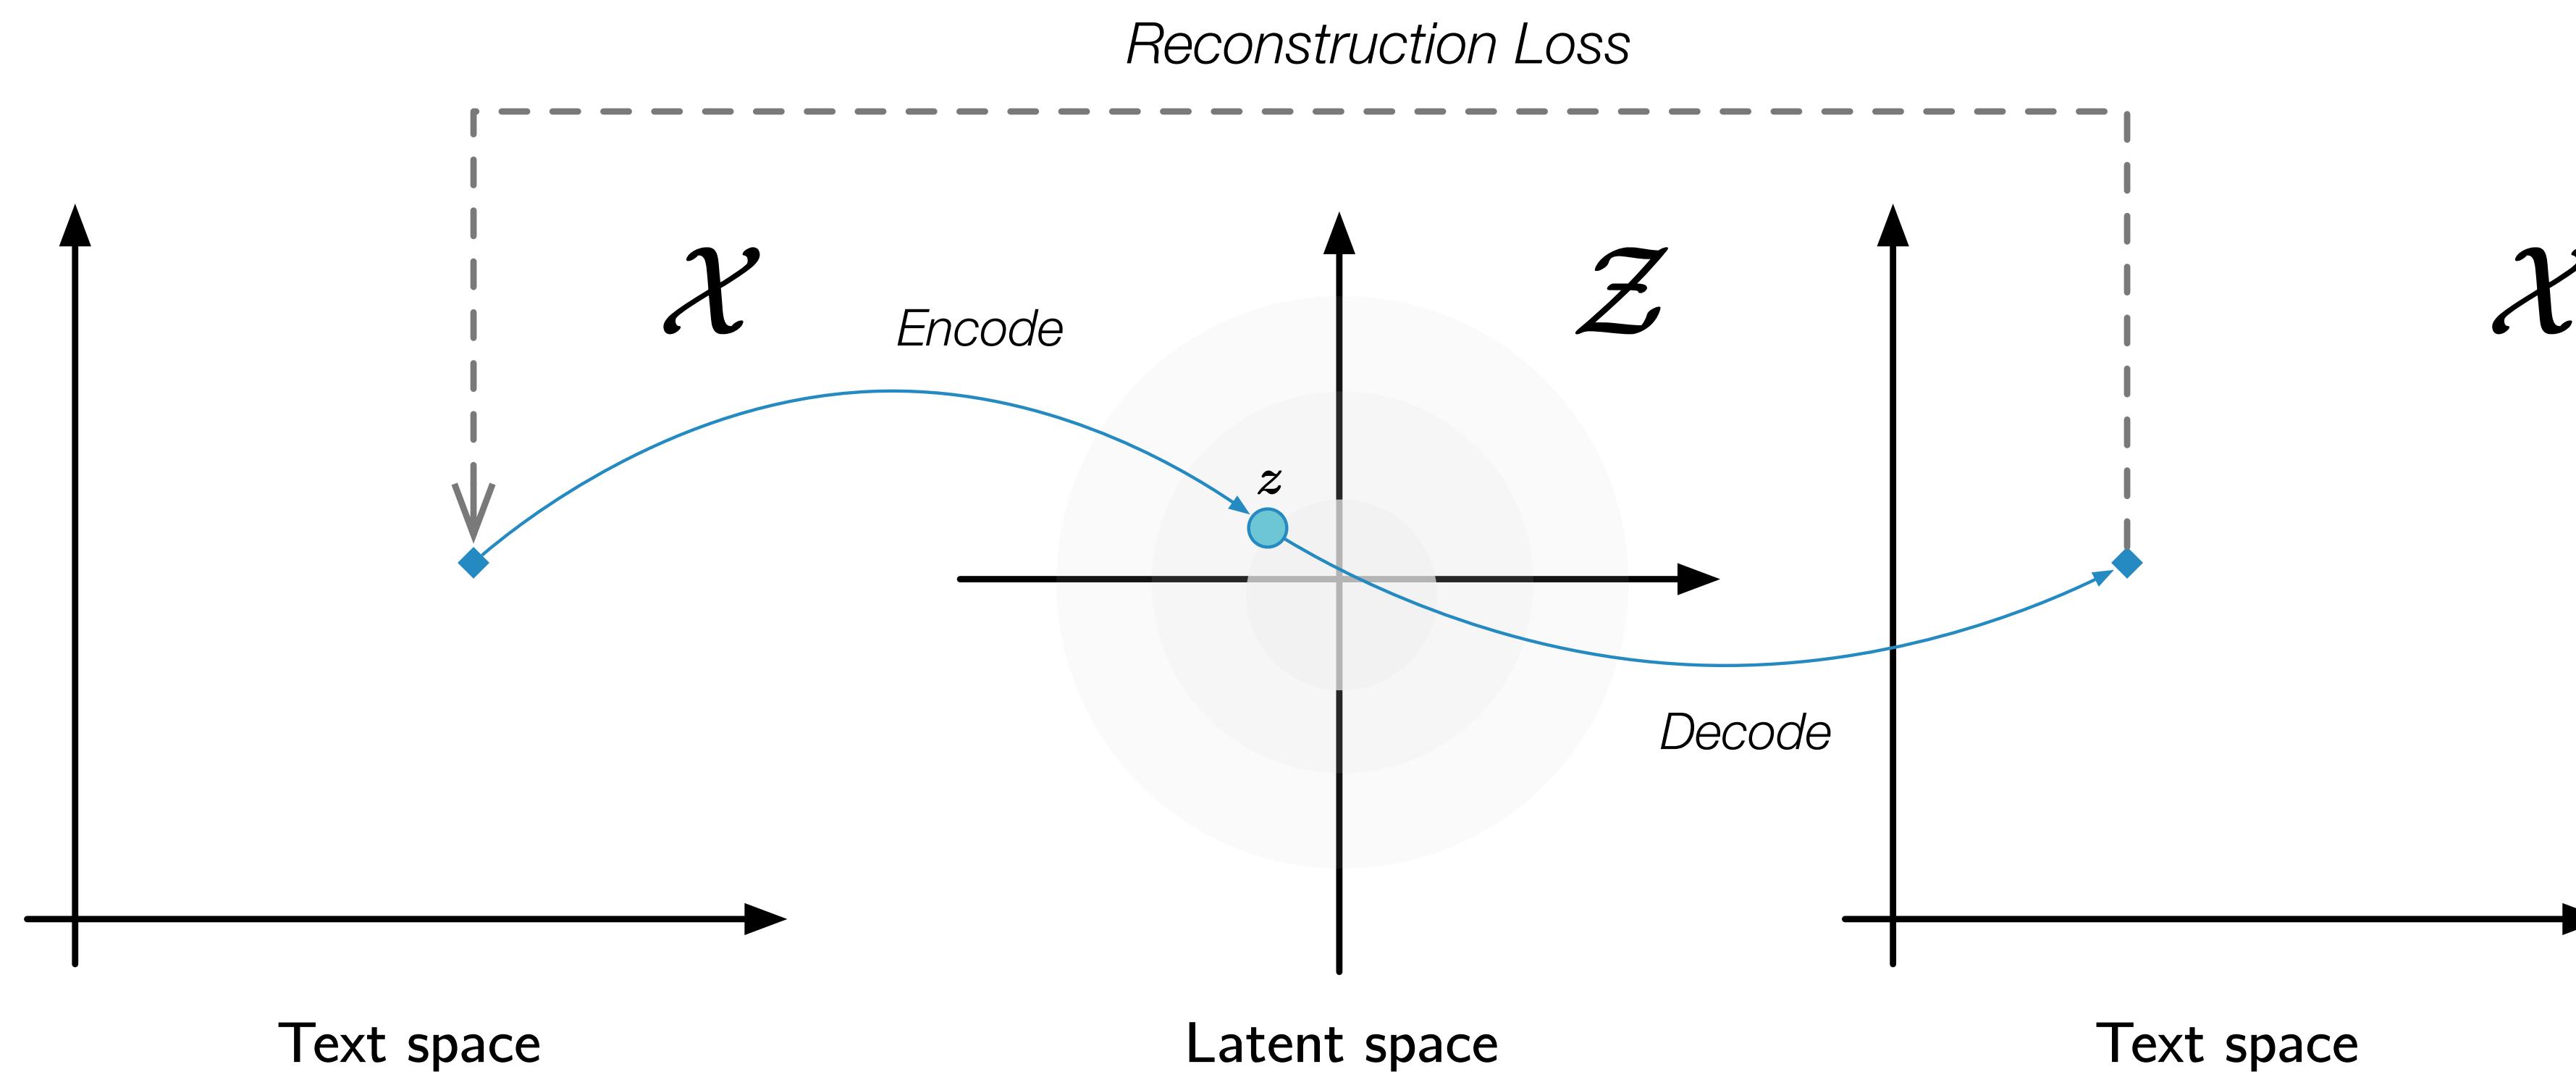

# Not Enough Data for Supervised Learning

- Human written reference summaries are extremely limited
- Large amounts of reviews are available

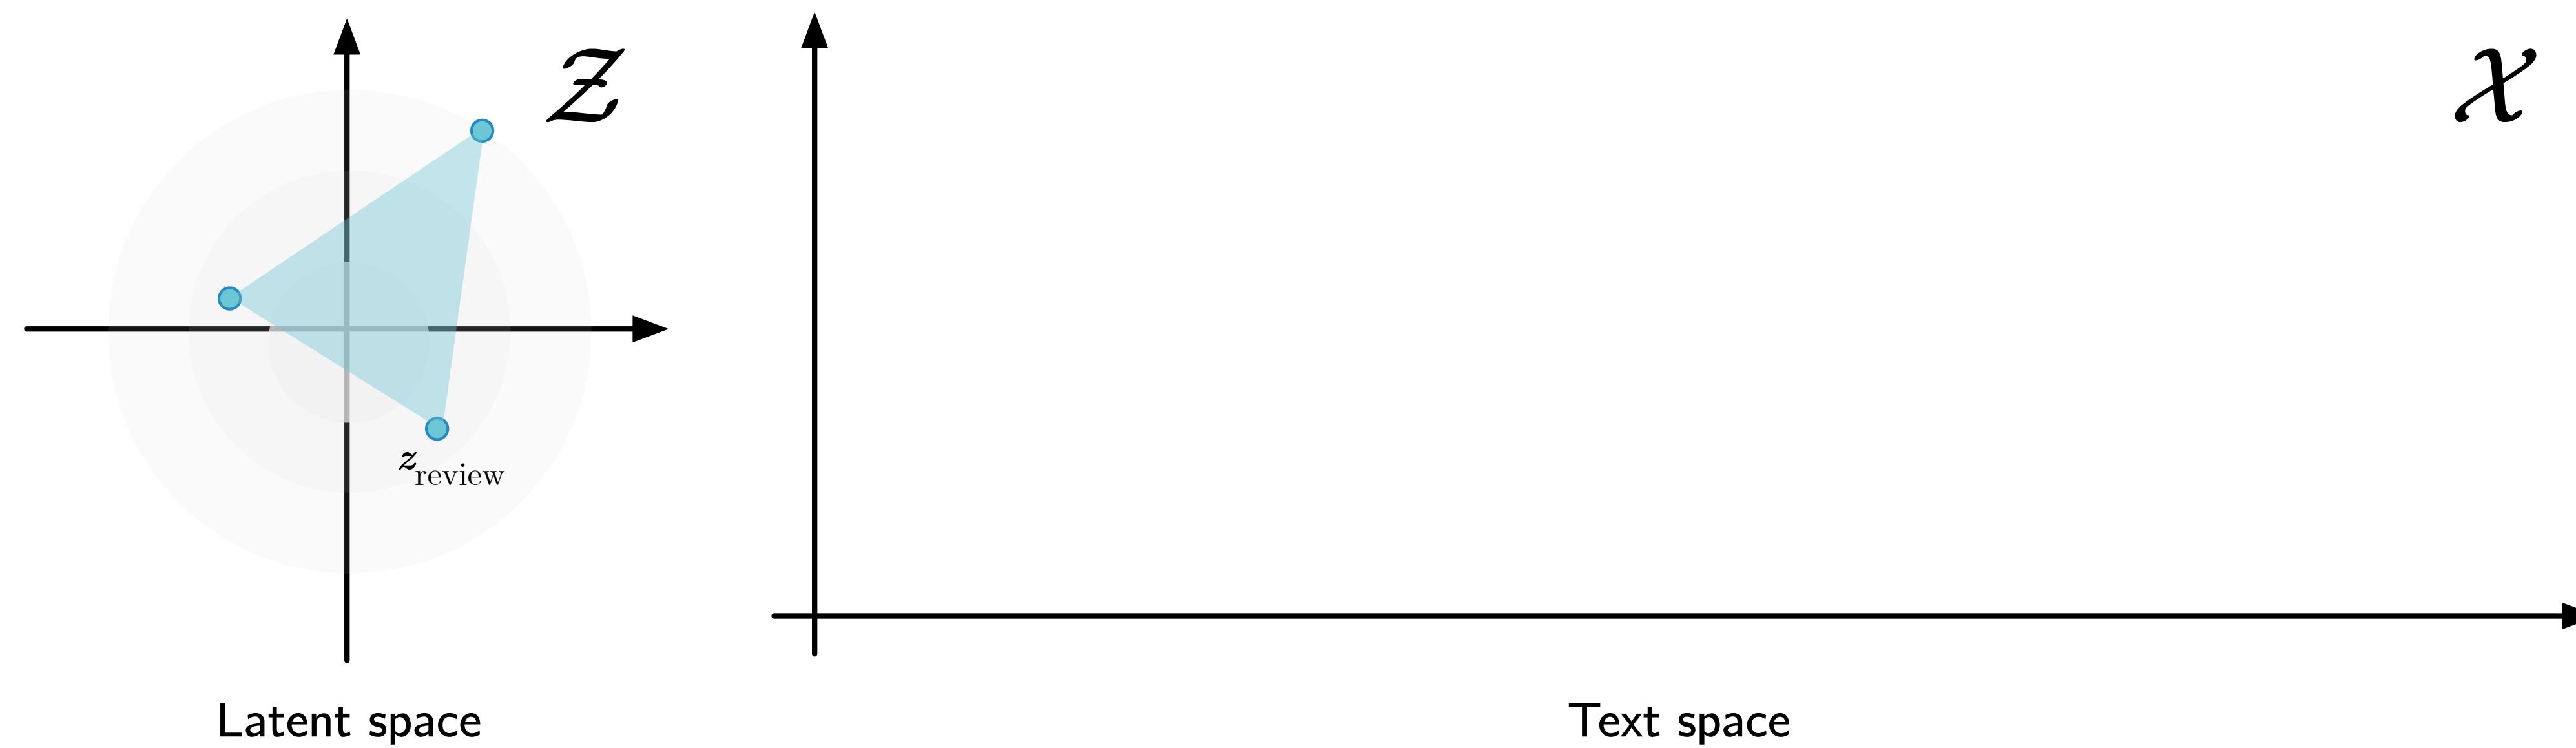

Unsupervised Learning for Opinion Summarization

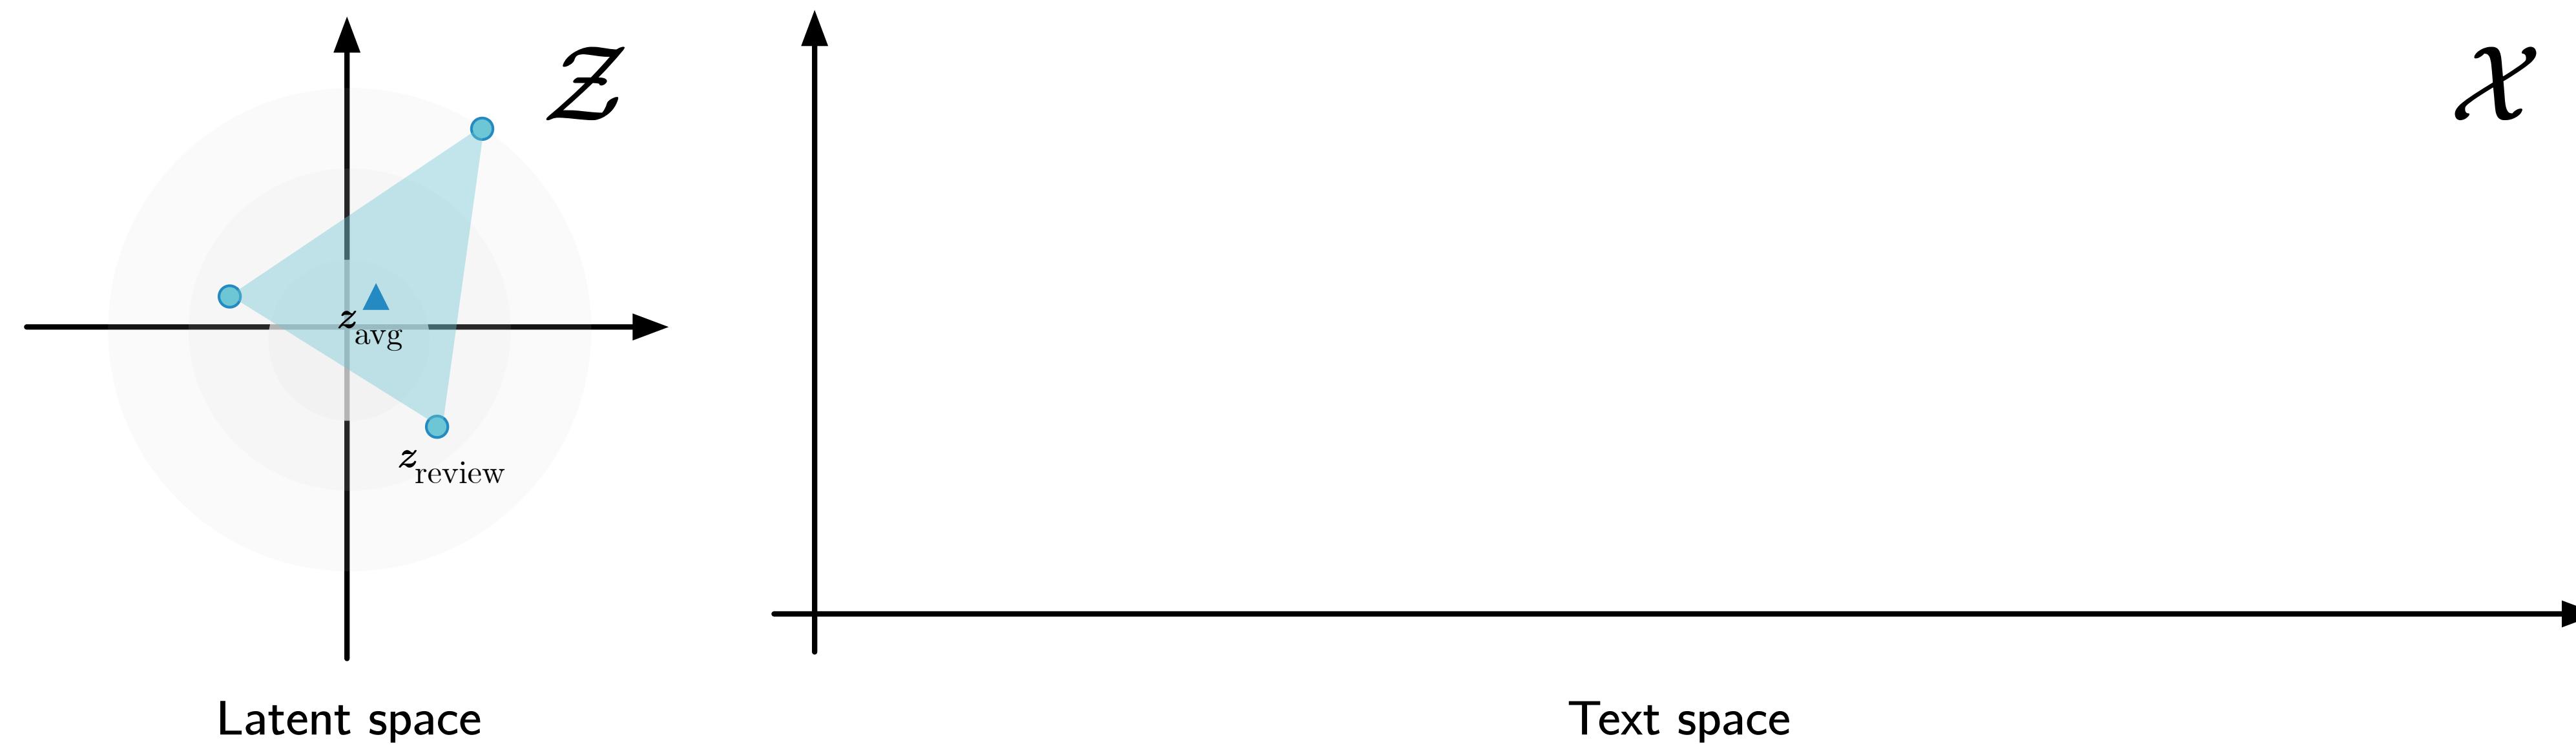

# Standard Approach: Auto Encoder

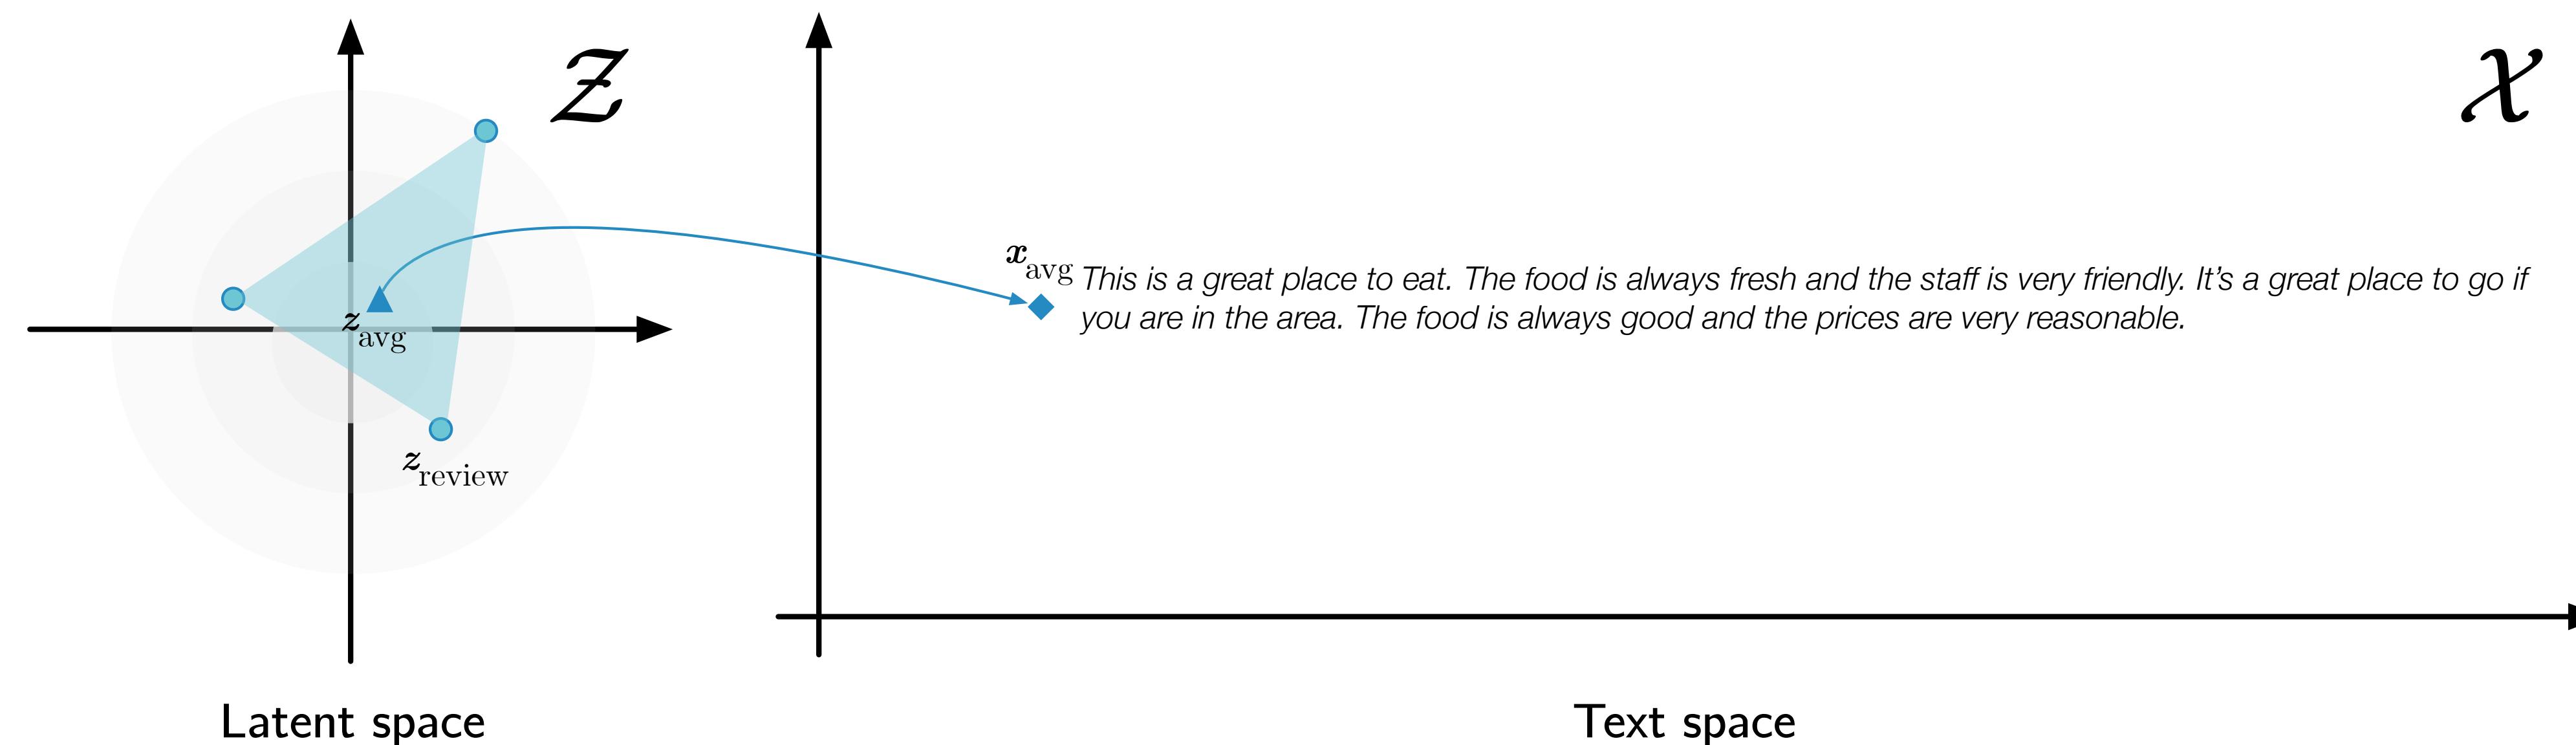

# Standard Approach: Summarizing in Latent Space

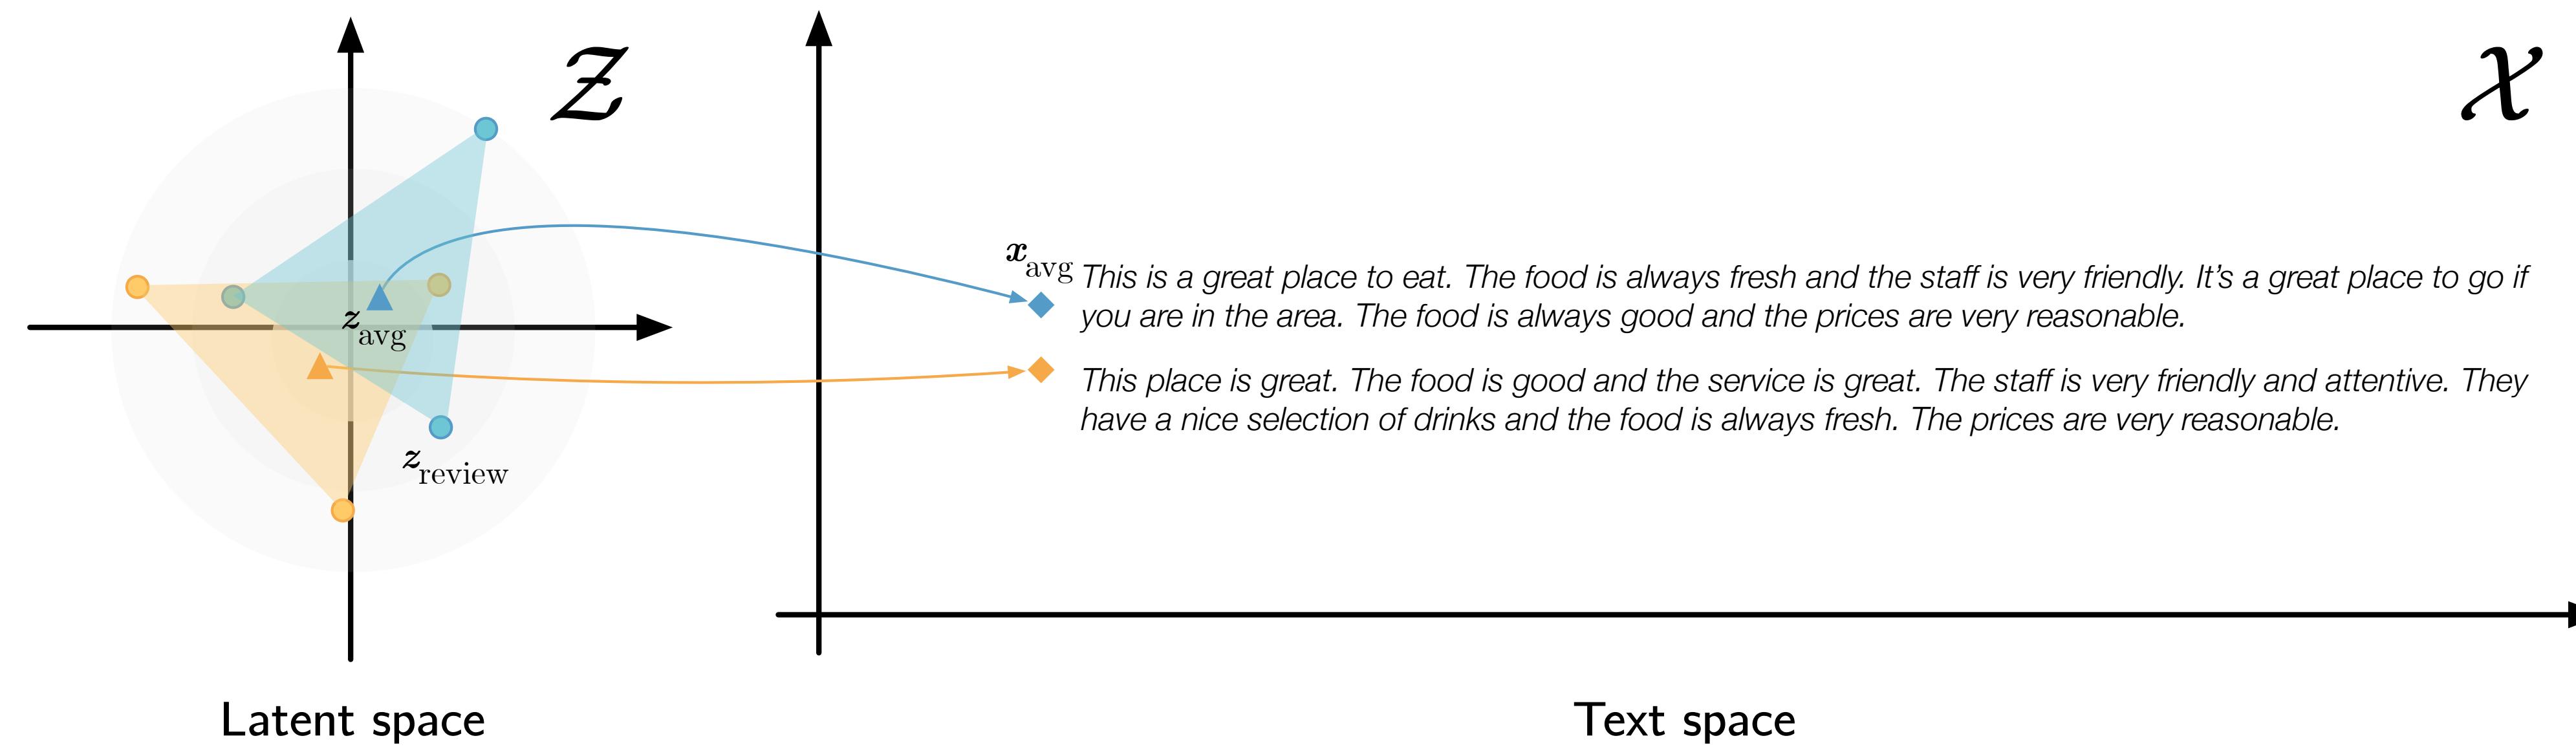

# Standard Approach: Summarizing in Latent Space

# Standard Approach: Summarizing in Latent Space

# Summary Vector Degeneration

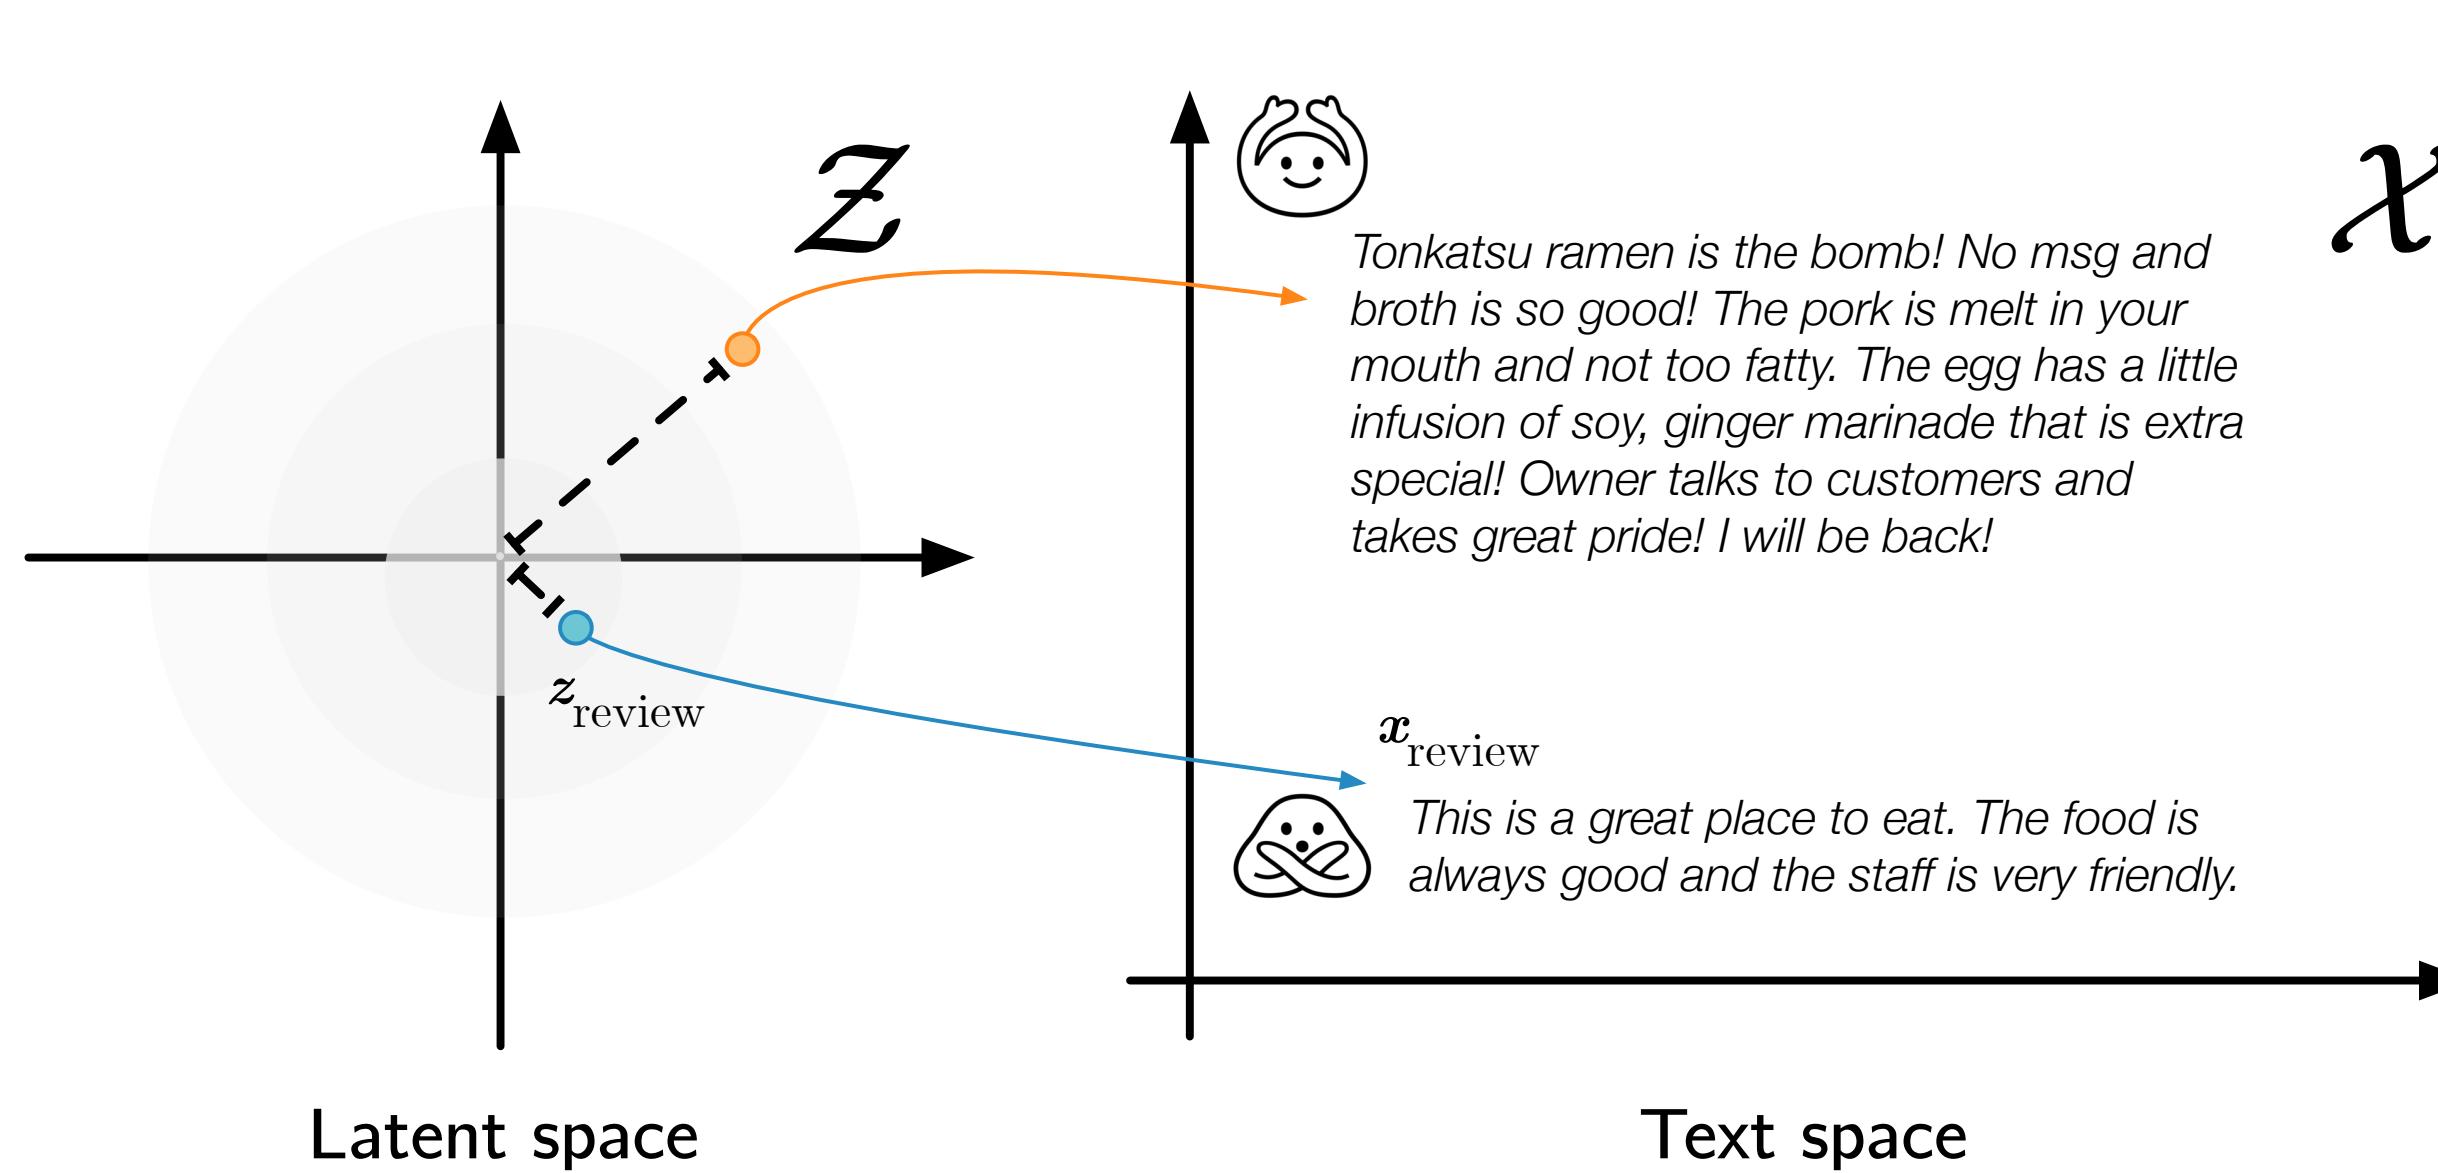

Models tend to generate generic summaries from averaged vector

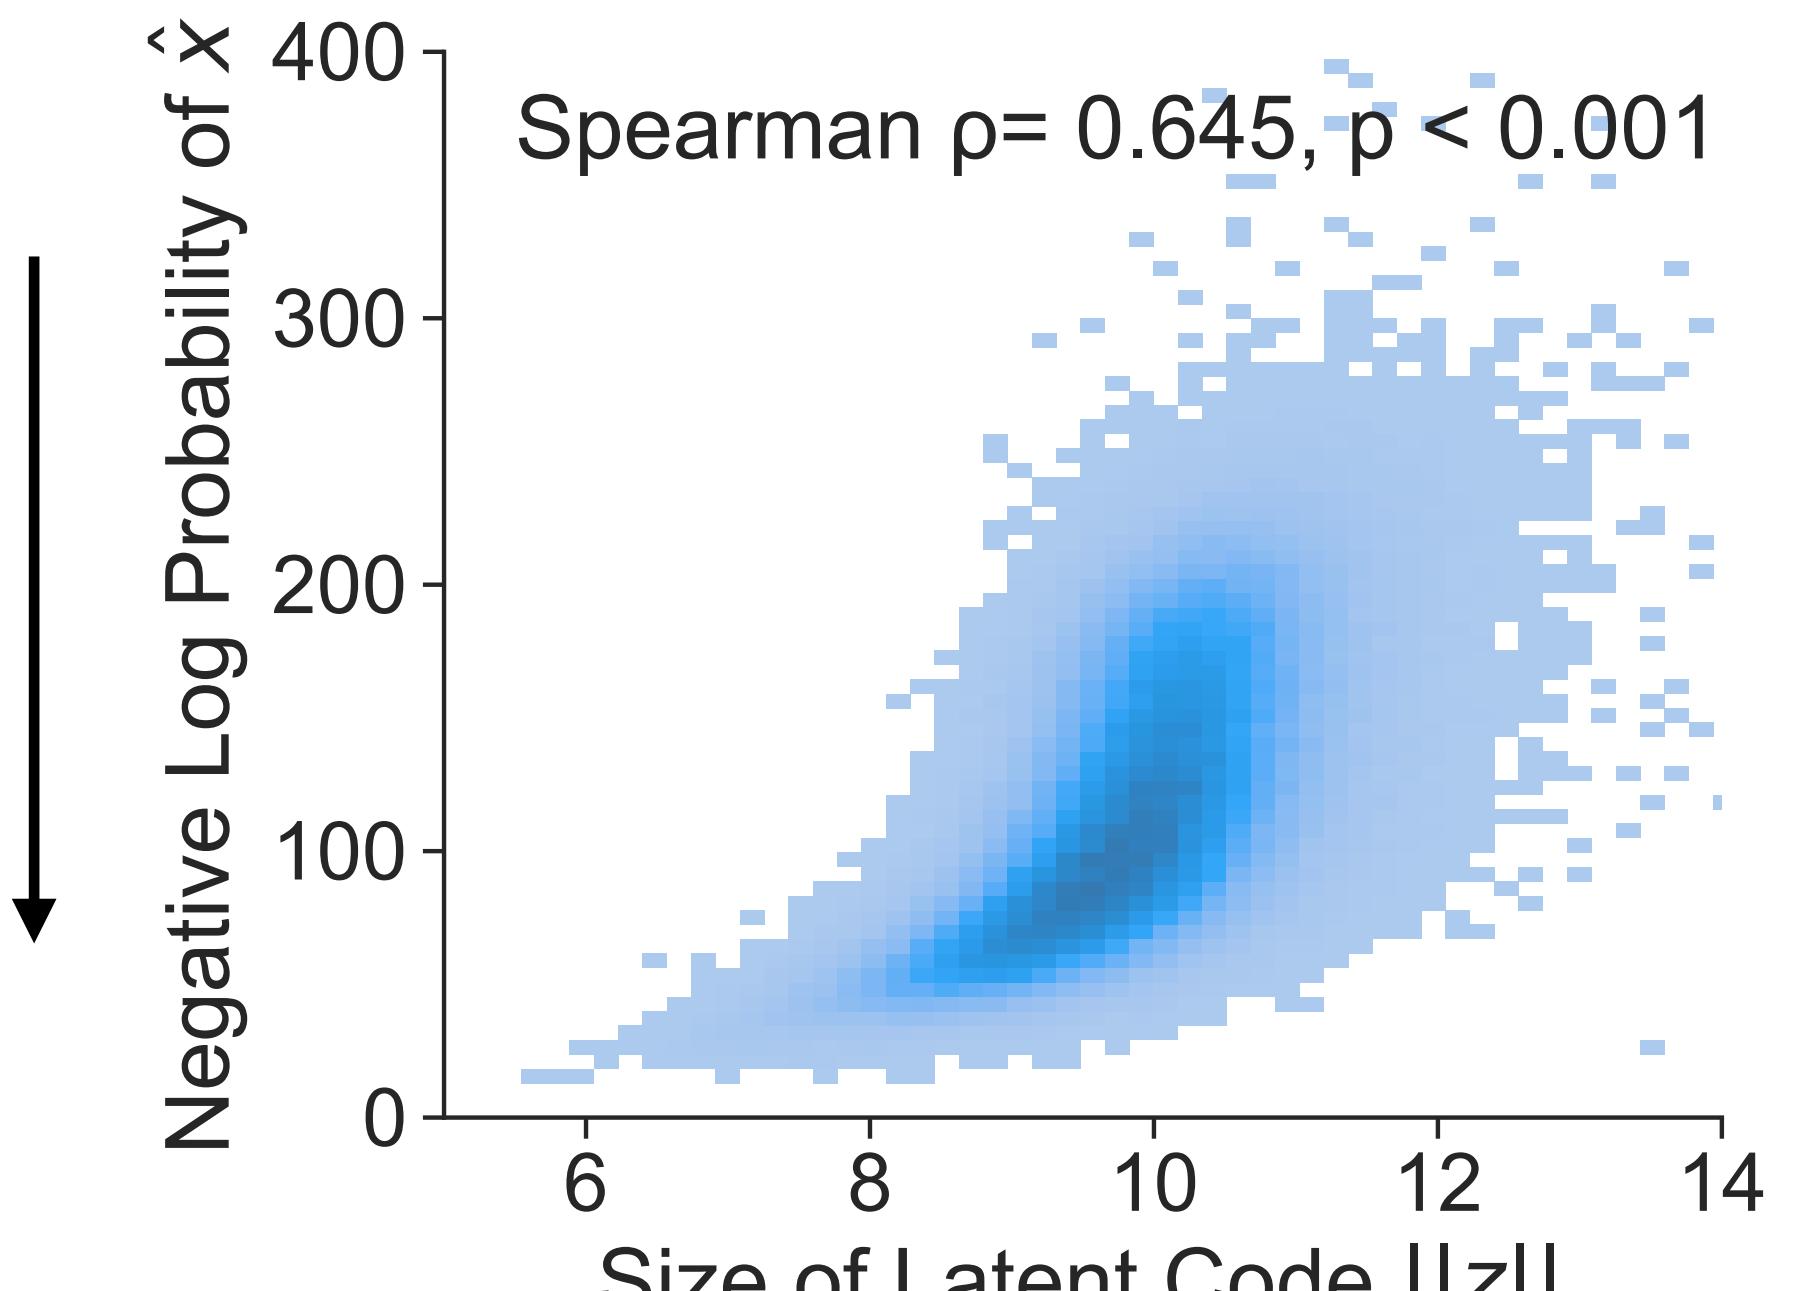

# Objective:

- Why *summary vector degeneration* happen?
- How to generate more *informative* opinion summaries?

# Smaller vectors are less informative

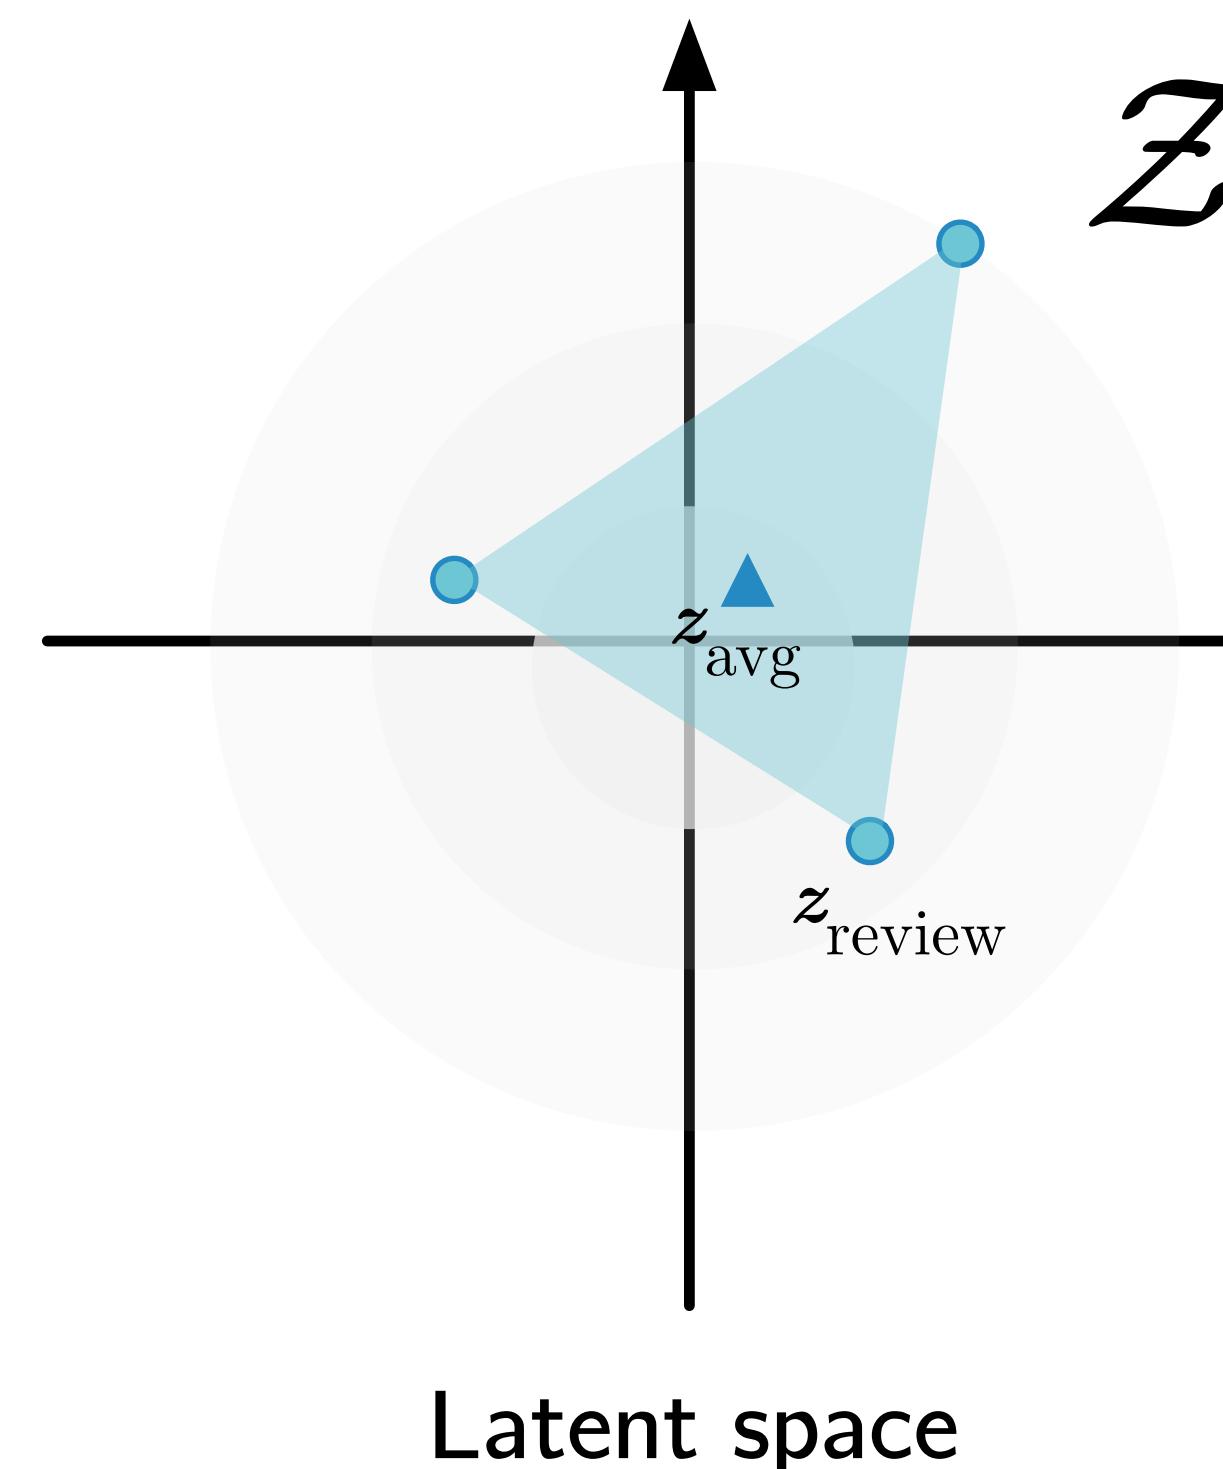

Less Informative

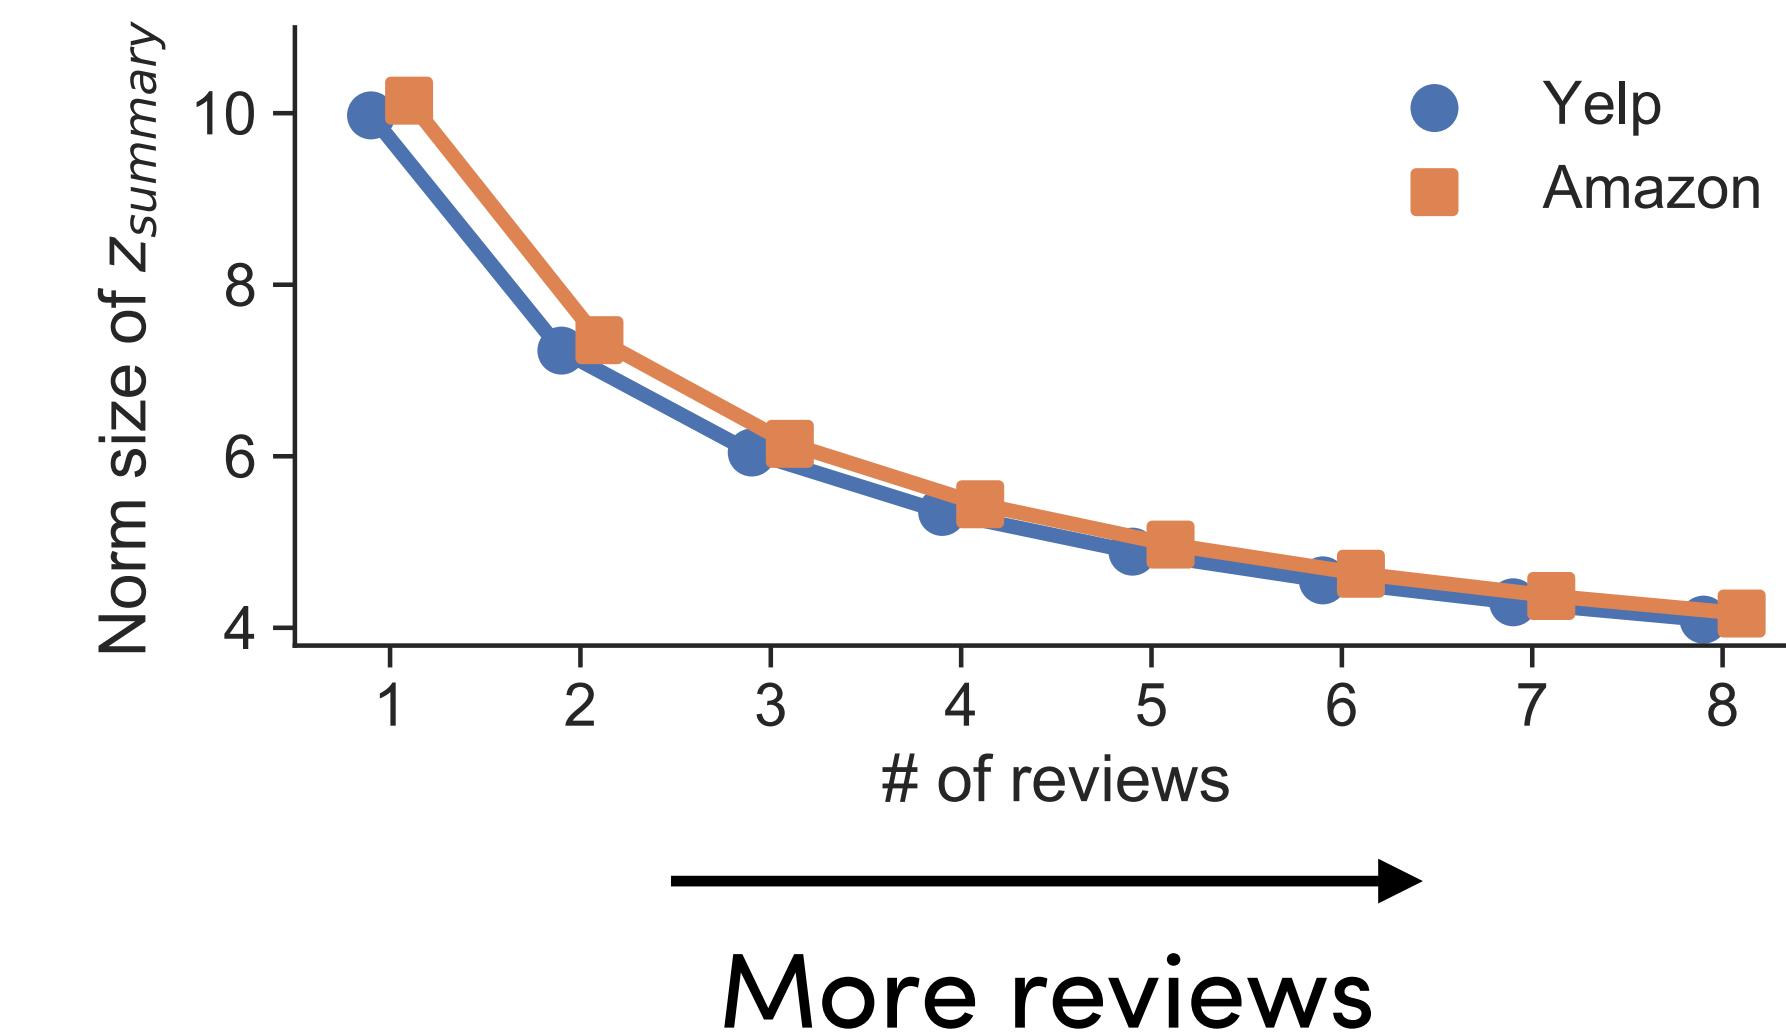

Closer to Center

# Averaged vectors are small

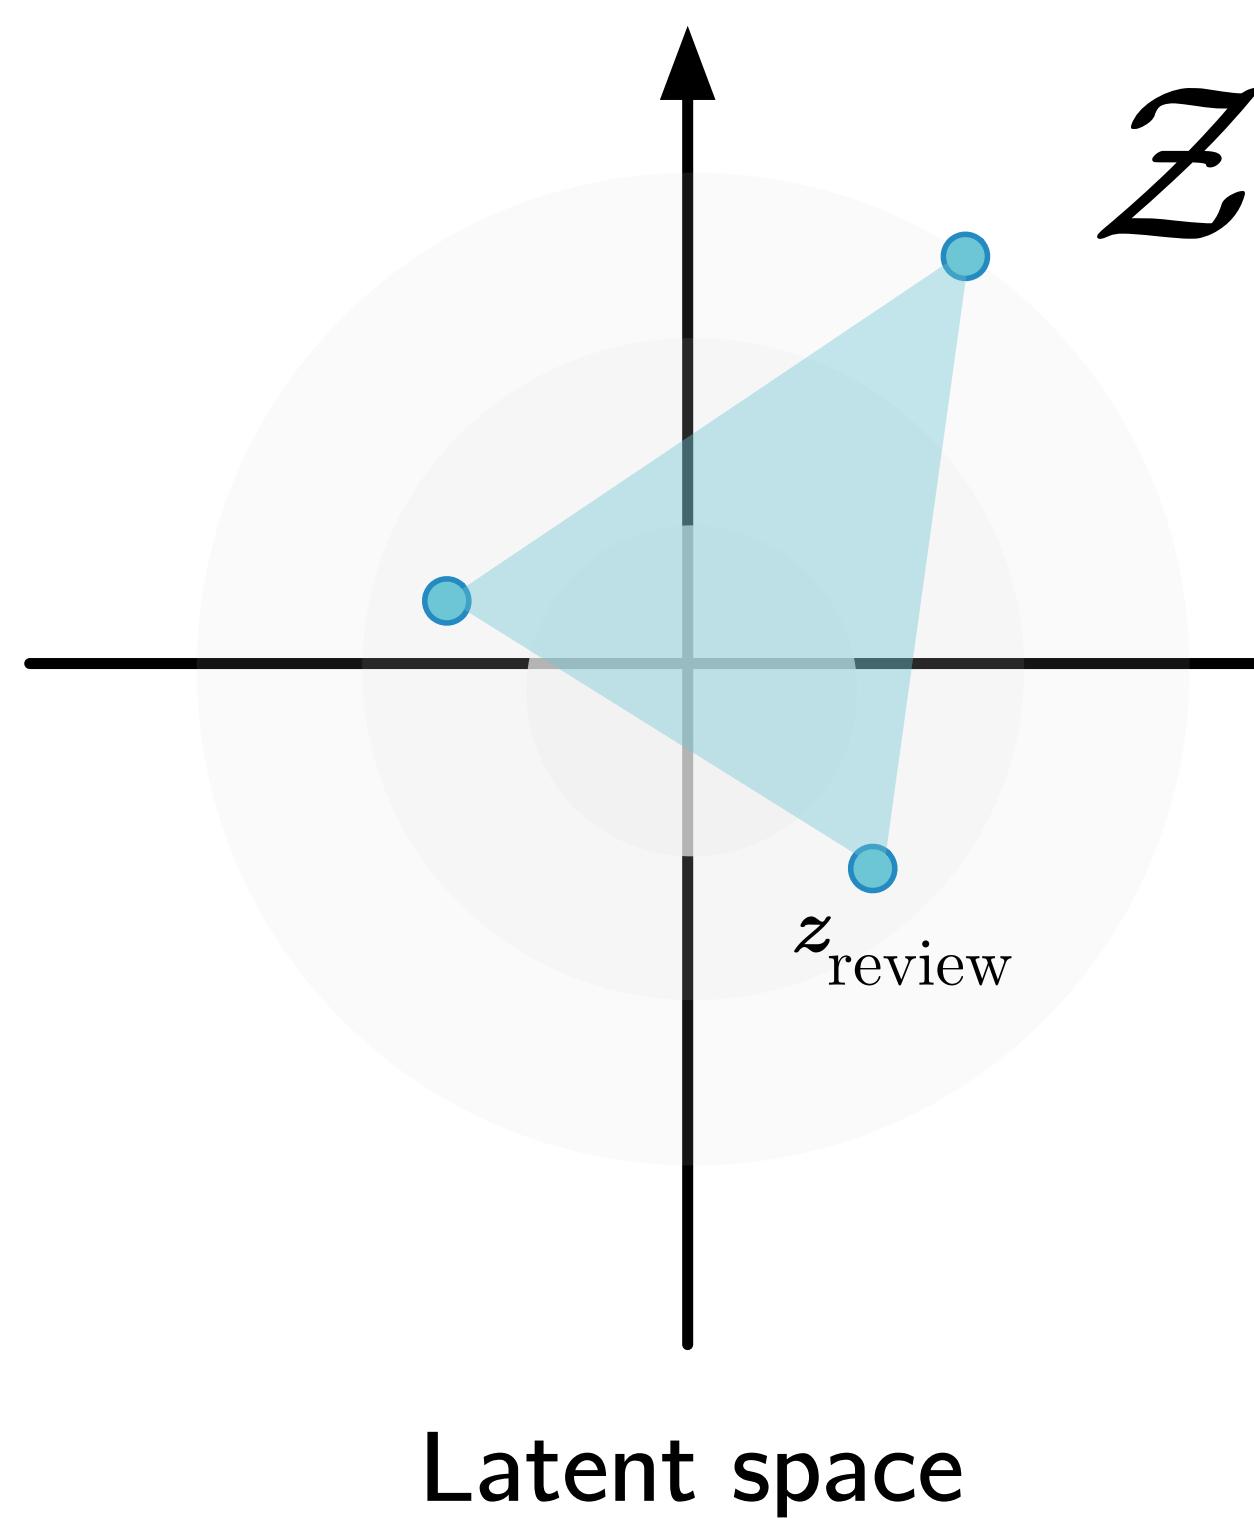

Closer to Center

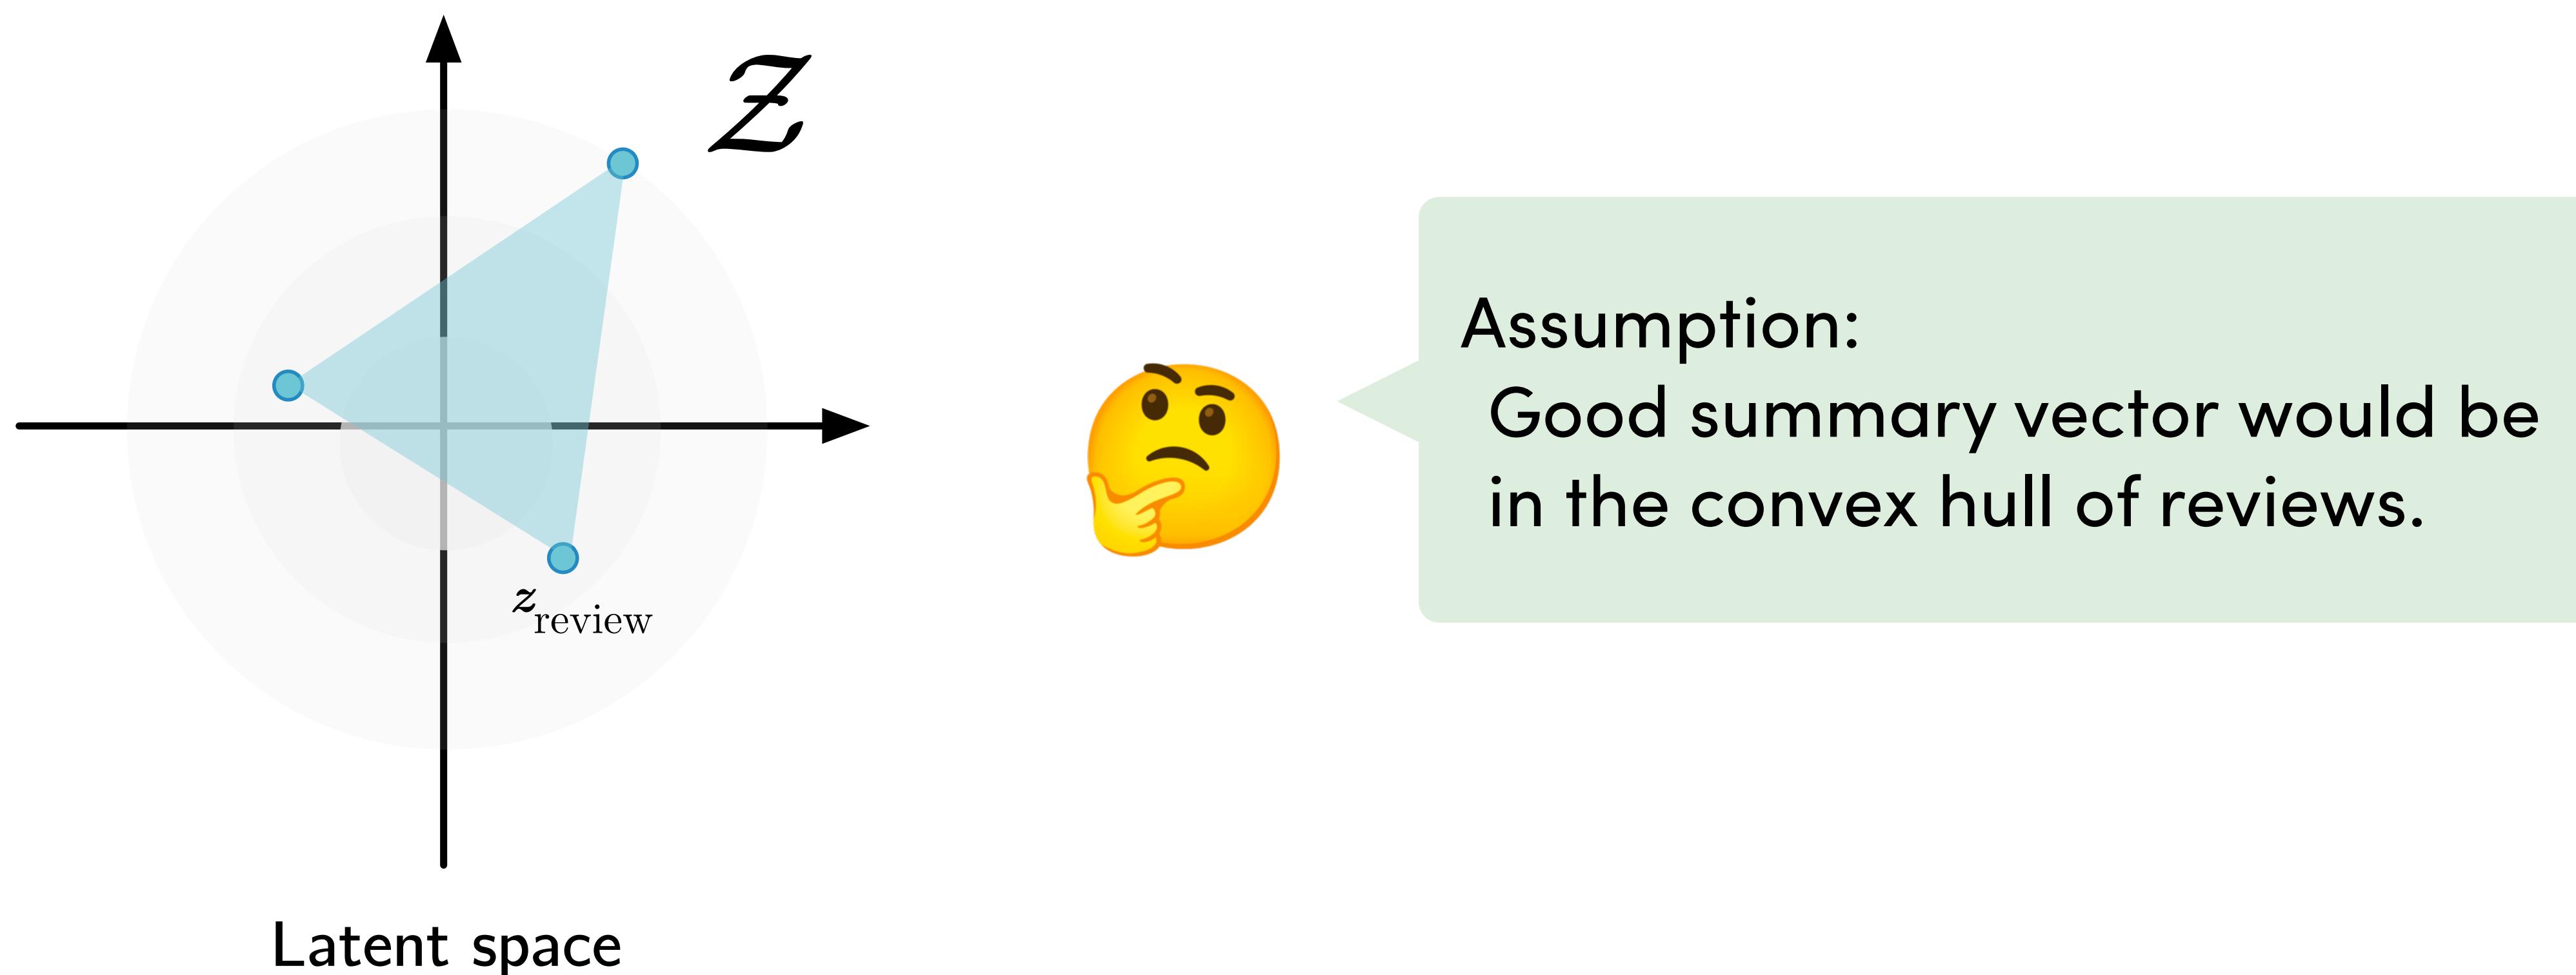

Averaged vector tends to generate less informative summary

\*BiMeanVAE: Text VAE (Bowman+, 2016) with BiLSTM and MeanPooling

# Few lines to run VAE-based Summarizer!

```
# pip install git+https://github.com/megagonlabs/coop.git
from coop import VAE

# Automatically download from Huggingface🤗 model hub
vae = VAE("megagonlabs/bimeanvae-yelp")

# Encode List[str] into Tensor
reviews = [
    "I love this ramen shop!! Highly recommended!!",
    "Here is one of my favorite ramen places! You must try!"
]
zs = vae.encode(reviews) # Tensor: [num_reviews * latent_size]

# Averaging to summarize!
z = zs.mean(dim=0, keepdim=True)
vae.generate(zs)

# Output
['I love this place! Food is amazing!!']
```

# Comparison is the key in decision making process

Laguna Garden Hotel Okinawa

ラグナガーデンホテル

4.2 ★★★★☆ 1,636 reviews · 4-star hotel

CHECK AVAILABILITY

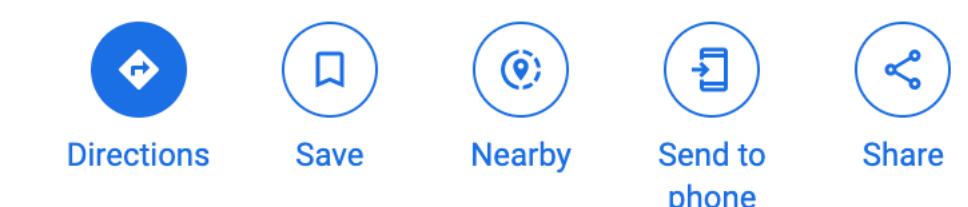

These two sound reasonable, but  
**which one should I pick?**

Moon Ocean Ginowan Hotel &  
Residence

ムーンオーシャン宜野湾 ホテル&レジデンス

4.4 ★★★★☆ 1,137 reviews · 4-star hotel

CHECK AVAILABILITY

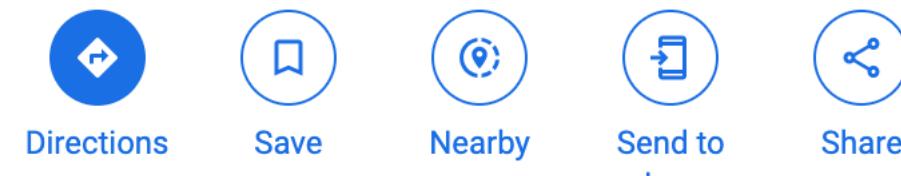

# Single entity summarization models are not sufficient!

Laguna Garden Hotel Okinawa

ラグナガーデンホテル

4.2 ★★★★☆ 1,636 reviews · 4-star hotel

CHECK AVAILABILITY

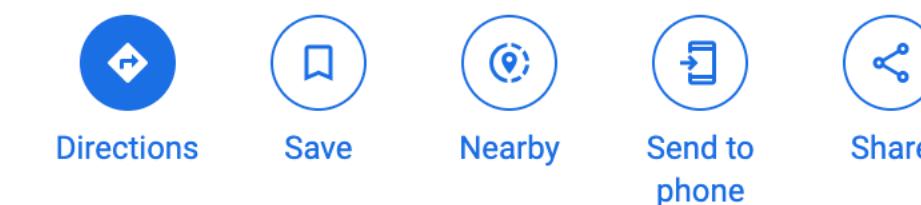

*“Large and clean rooms with great views. Convenient location near city center.”*

Moon Ocean Ginowan Hotel & Residence

ムーンオーシャン宜野湾 ホテル&レジデンス

4.4 ★★★★☆ 1,137 reviews · 4-star hotel

CHECK AVAILABILITY

*“Good location near city center and shopping. Rooms are large and clean. Rooms have views.”*

Single entity summarization models often generates generic opinions

# Summaries FAIL to include common/contrastive opinions

Contrastive summary contain many common opinions and vise versa.

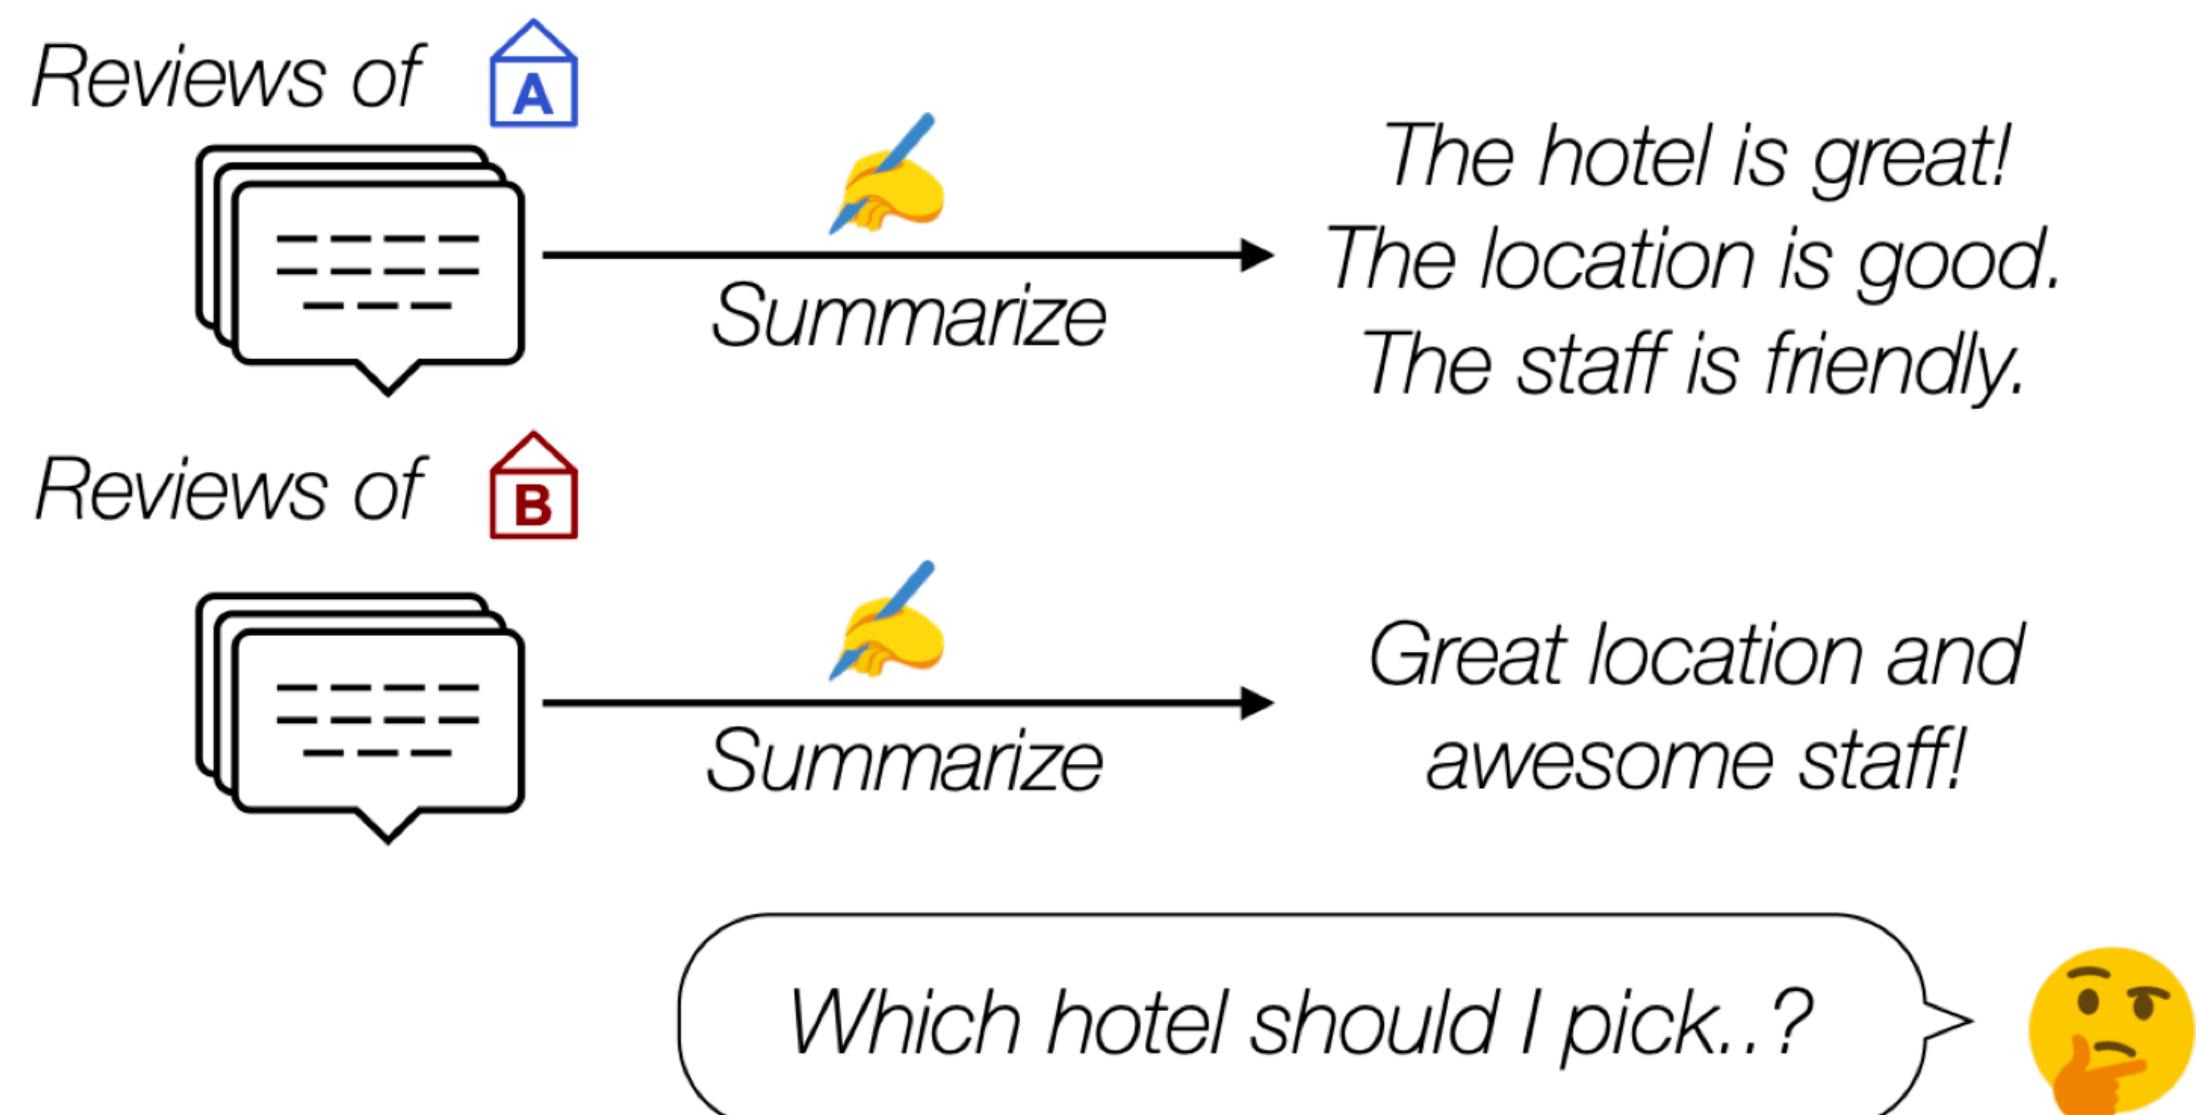

**Text highlighted refers to common opinions (Bad content)**

This is a perfect hotel for any type of stay and you will want to keep coming back for the tranquillity, *unbeatable price* and the great service. This hotel is in a really bustling area of Rome and close to the main sights of the city. **The rooms in the hotel are a good size, with spacious bathrooms and even some really great chocolates on the bed.** The hotel staff are very helpful and always willing to help out with their polite manners. The breakfast provided by the hotel was really good, *although a little bit basic.* **The elevator in this hotel is a little bit old but it's in good condition.**

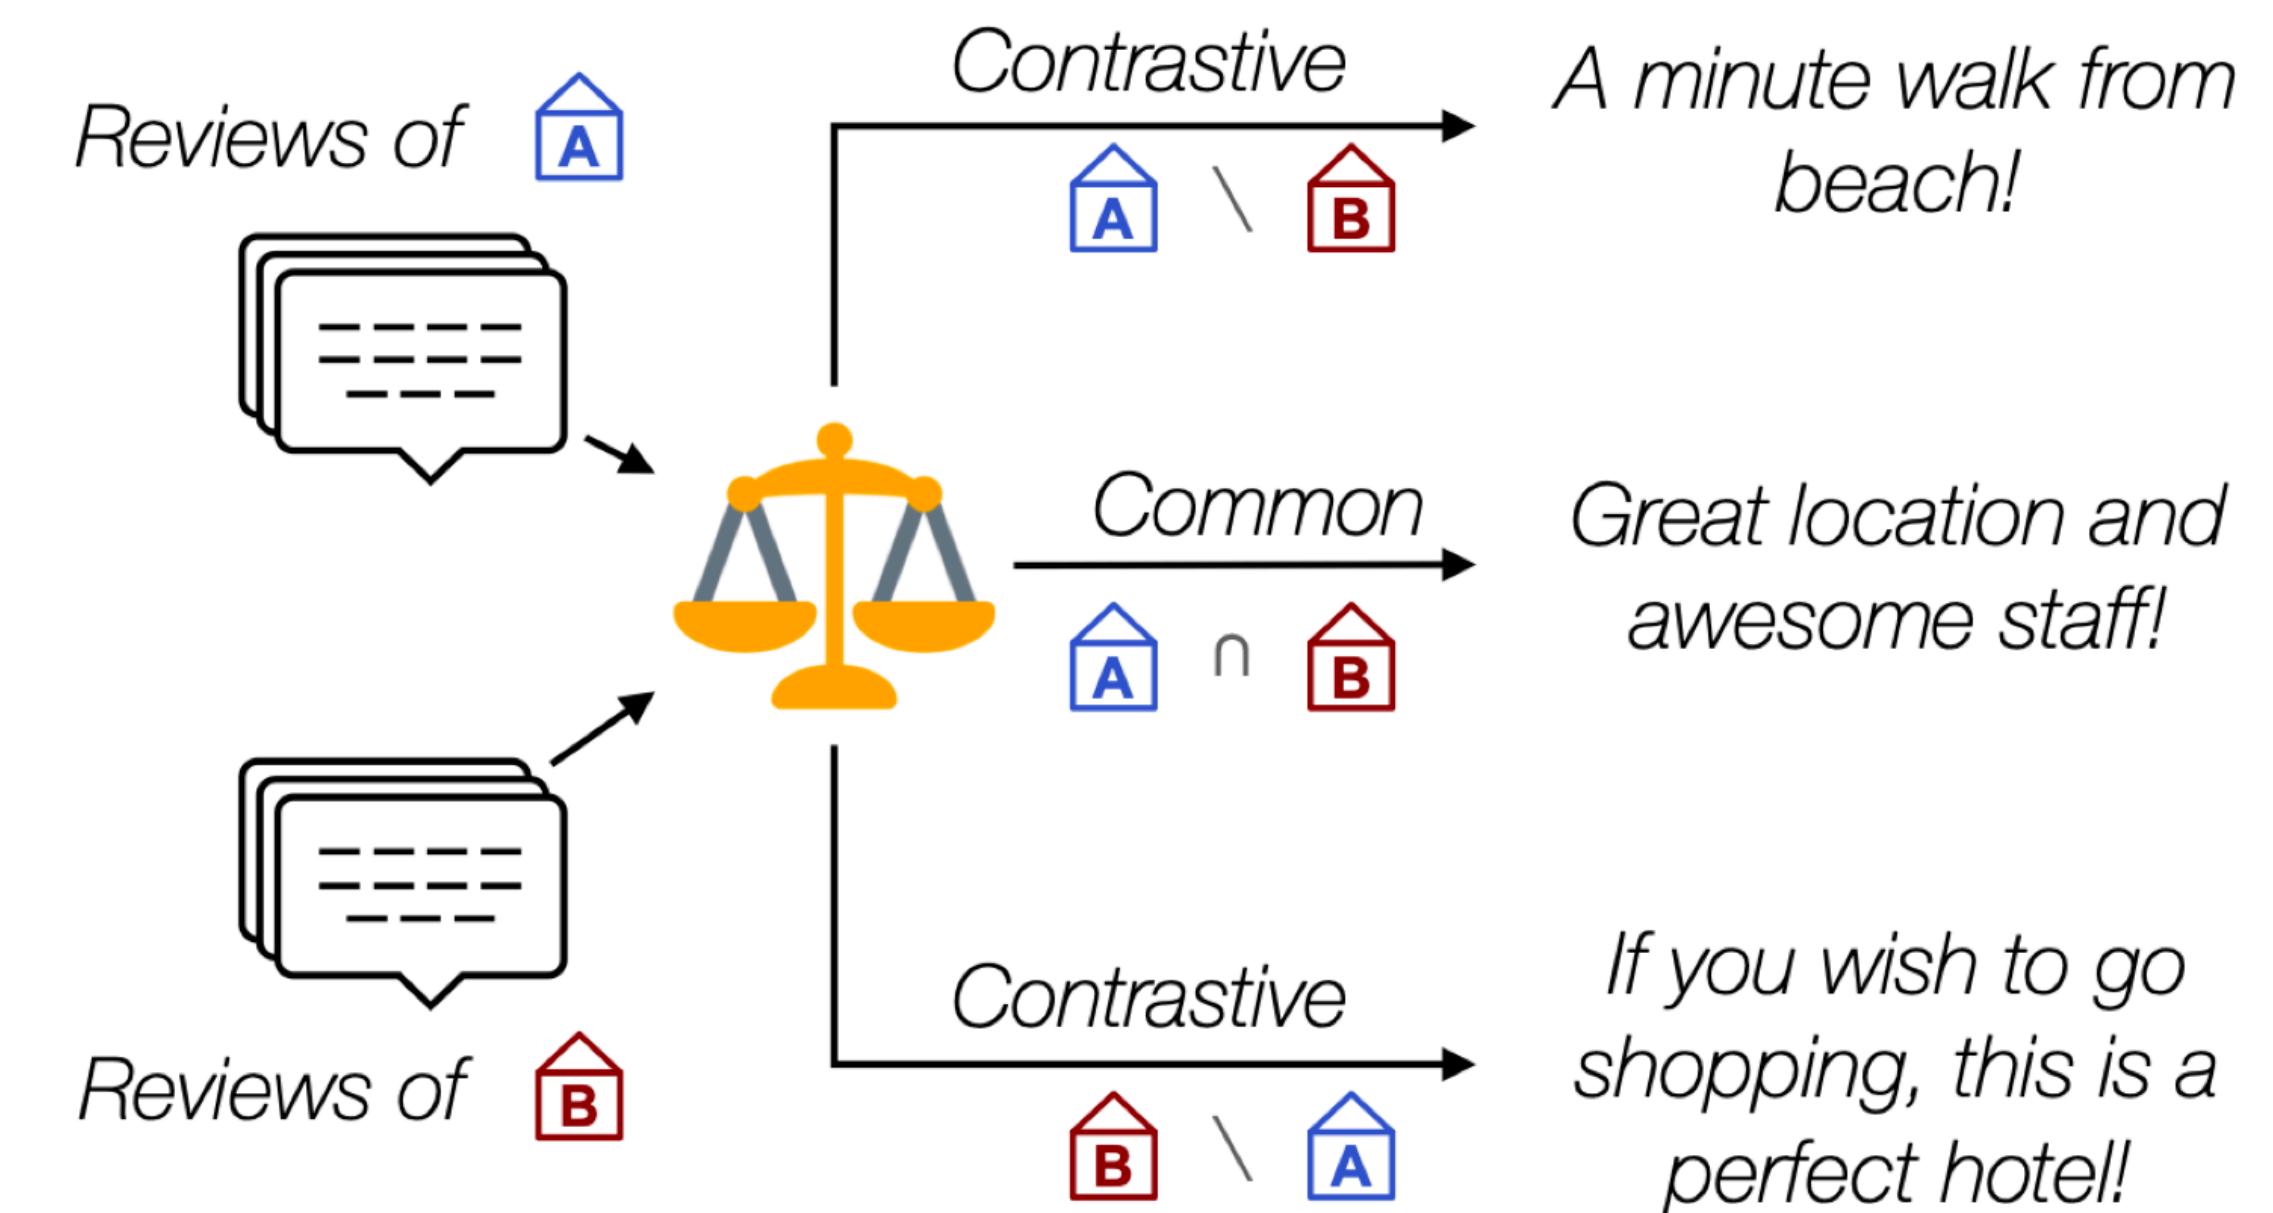

**Text in blue refers to contrastive opinions (Good content)**

# Introducing Comparative Opinion Summarization

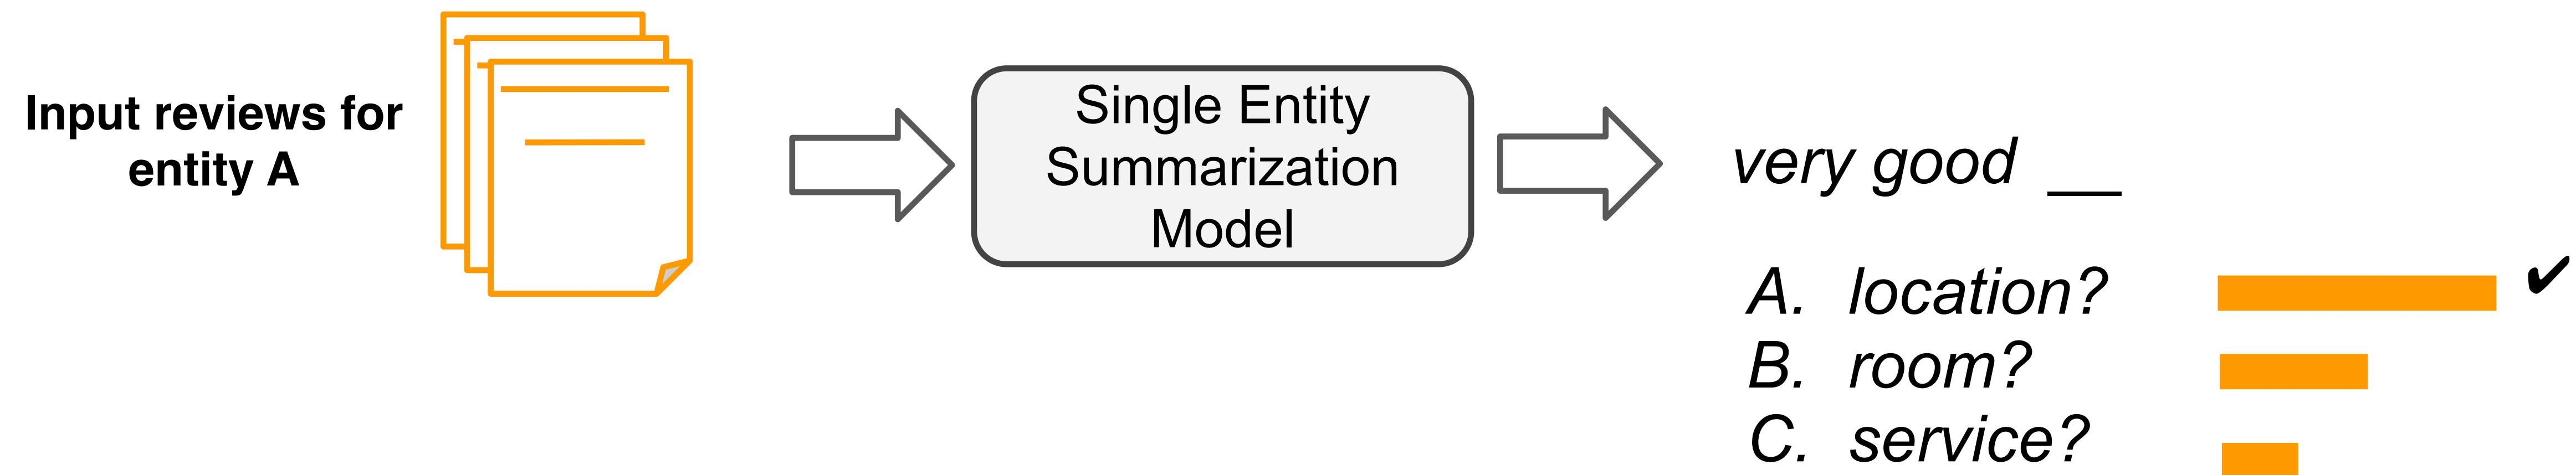

## Single Entity Opinion Summarization

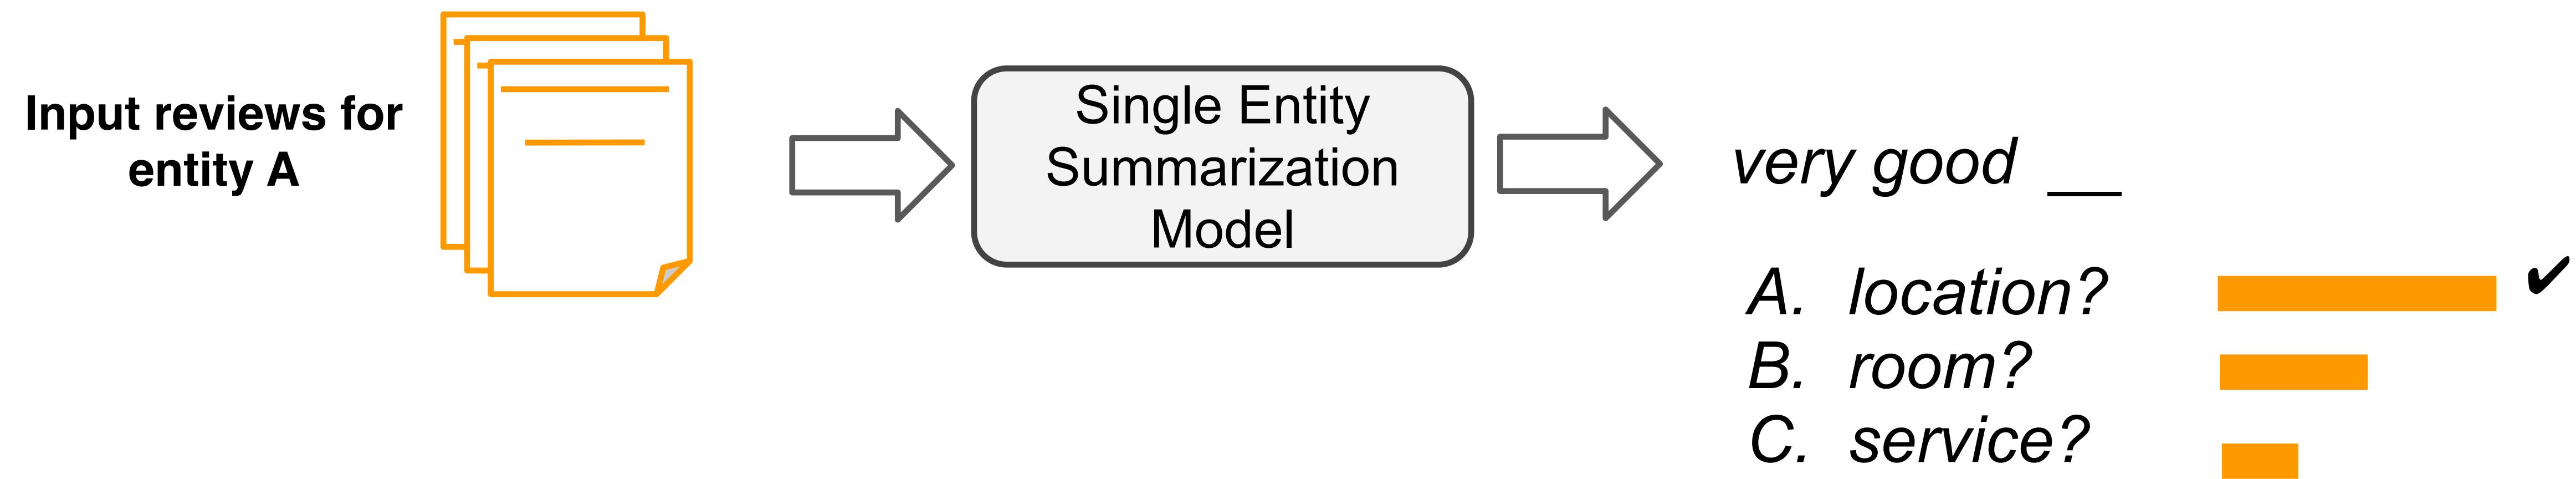

## Comparative Opinion Summarization

# Use Collaborative-Decoding for summary generation

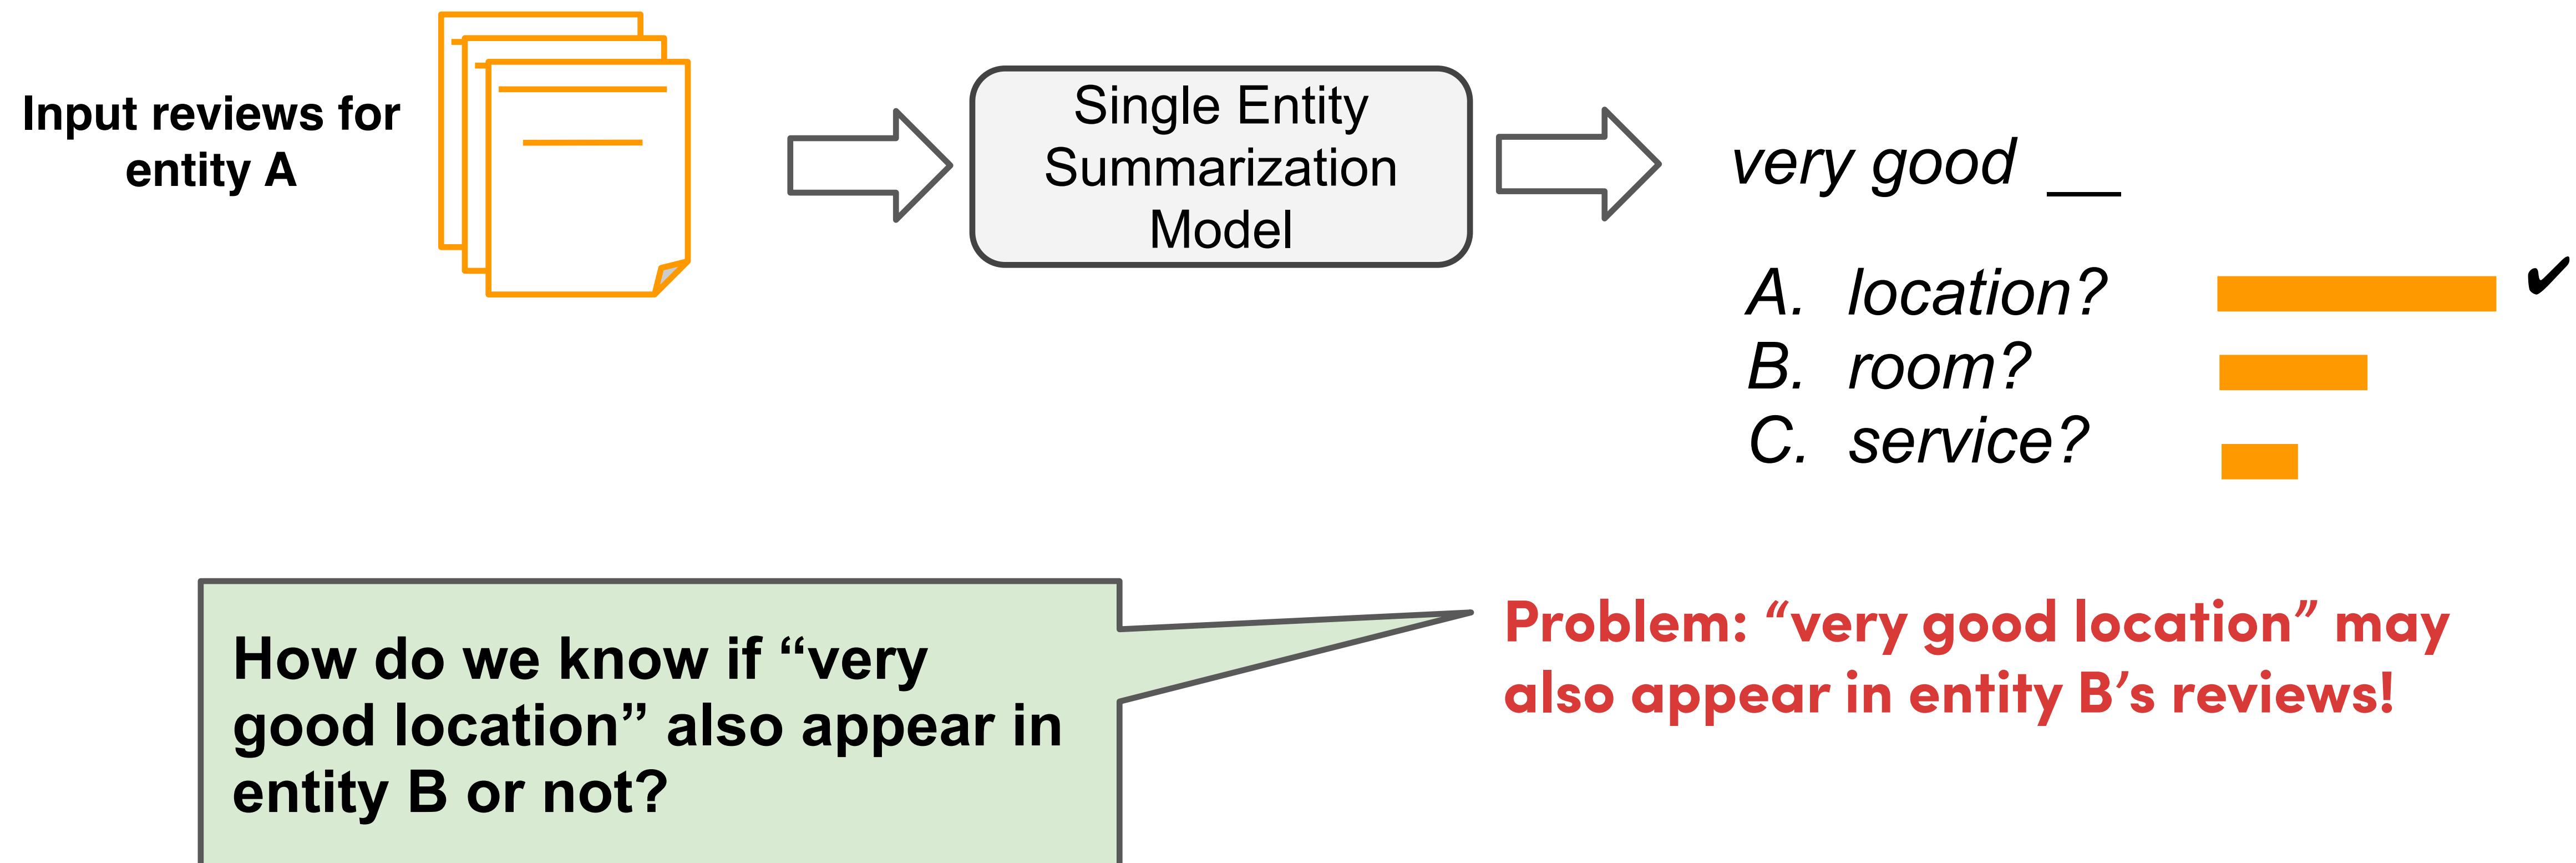

# Use Collaborative-Decoding for summary generation

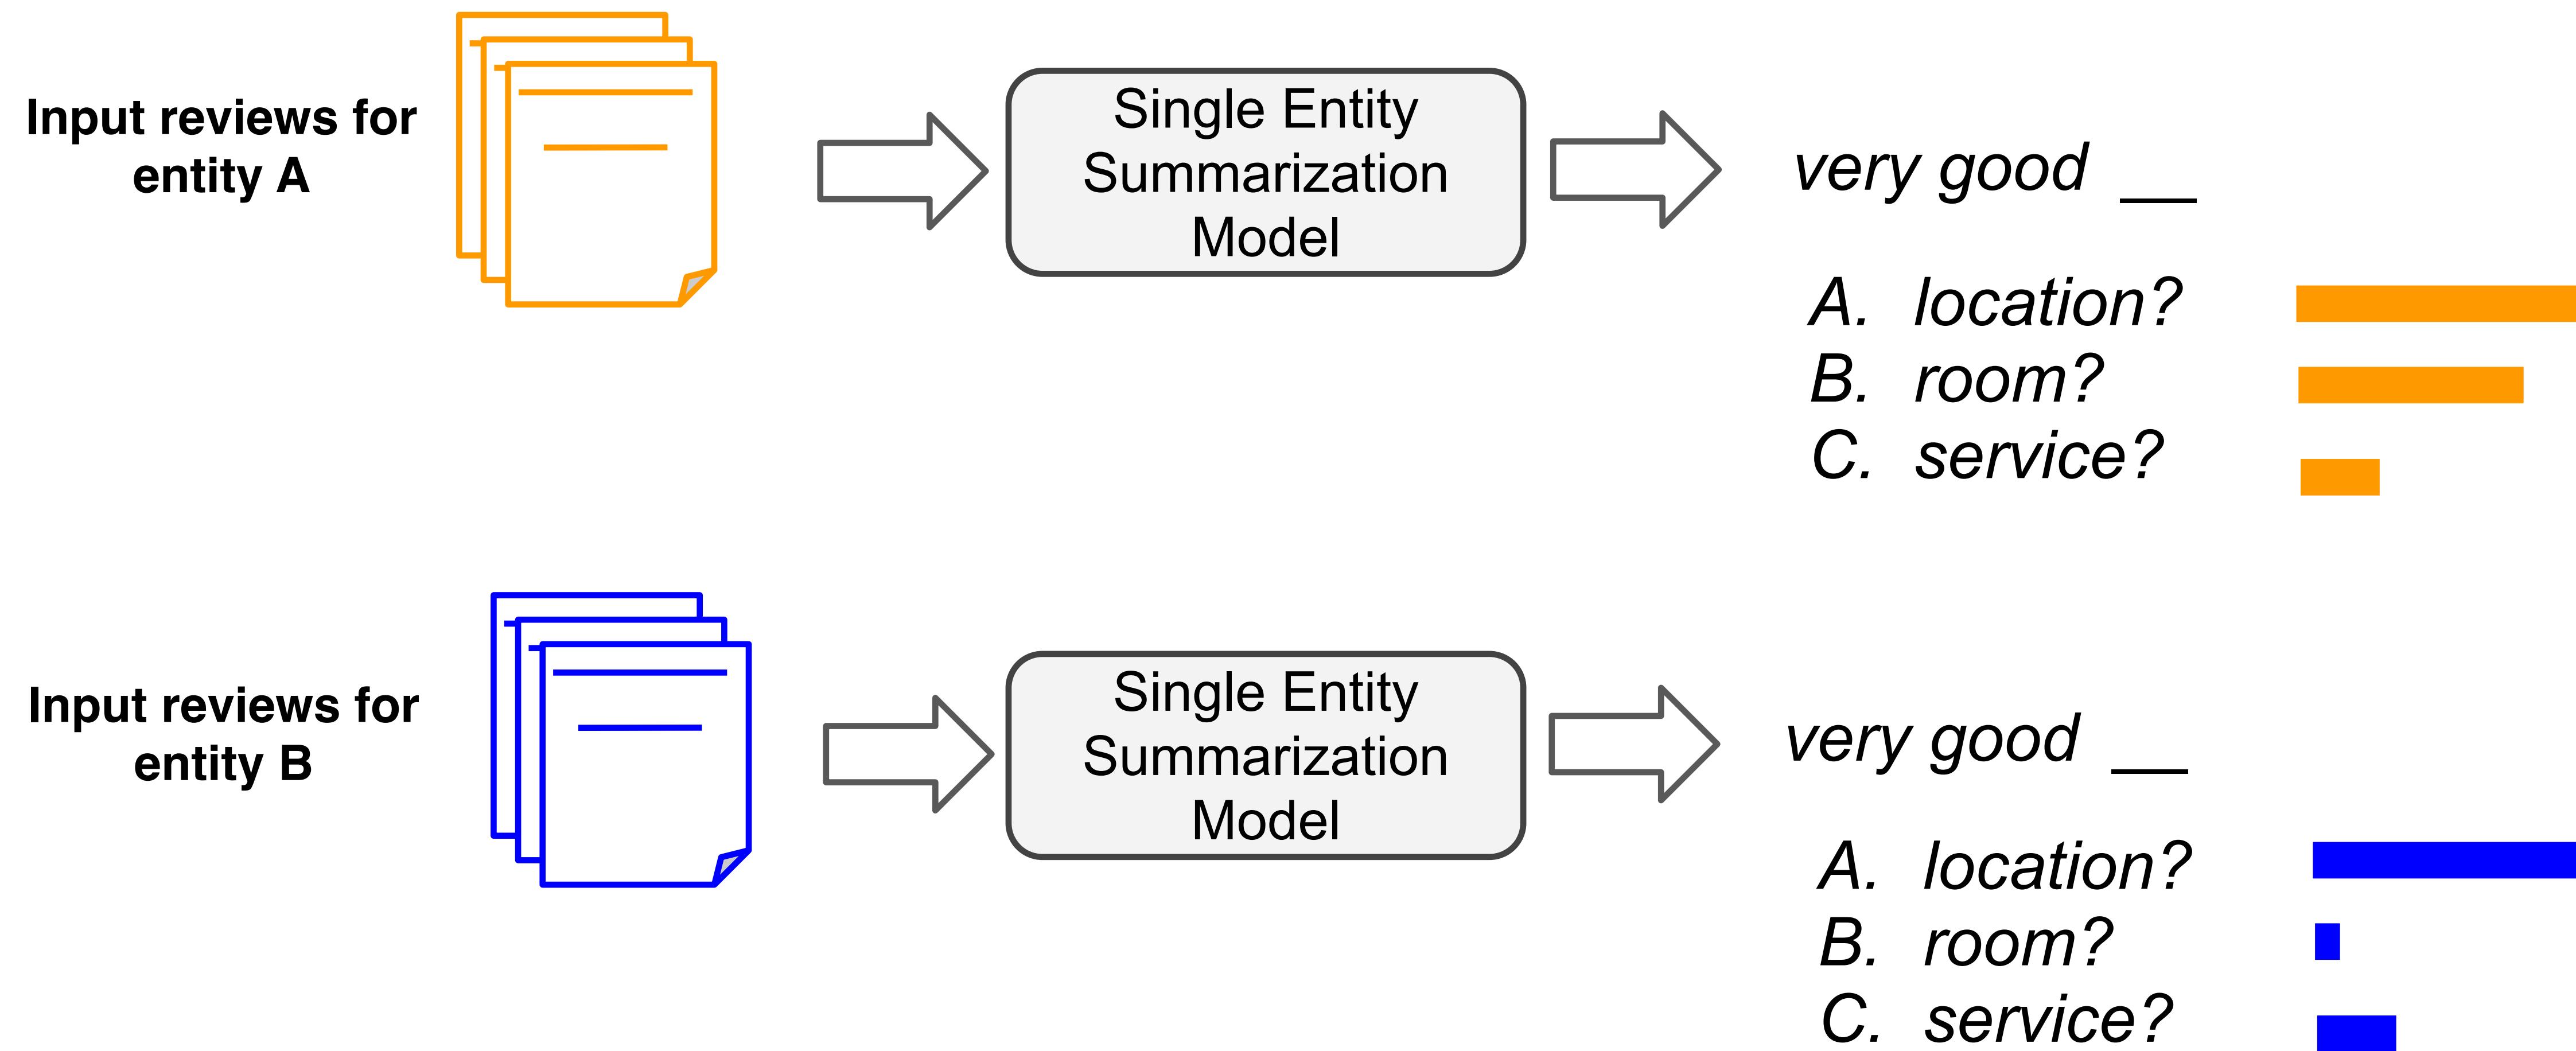

**Problem: “very good location” may also appear in entity B’s reviews!**

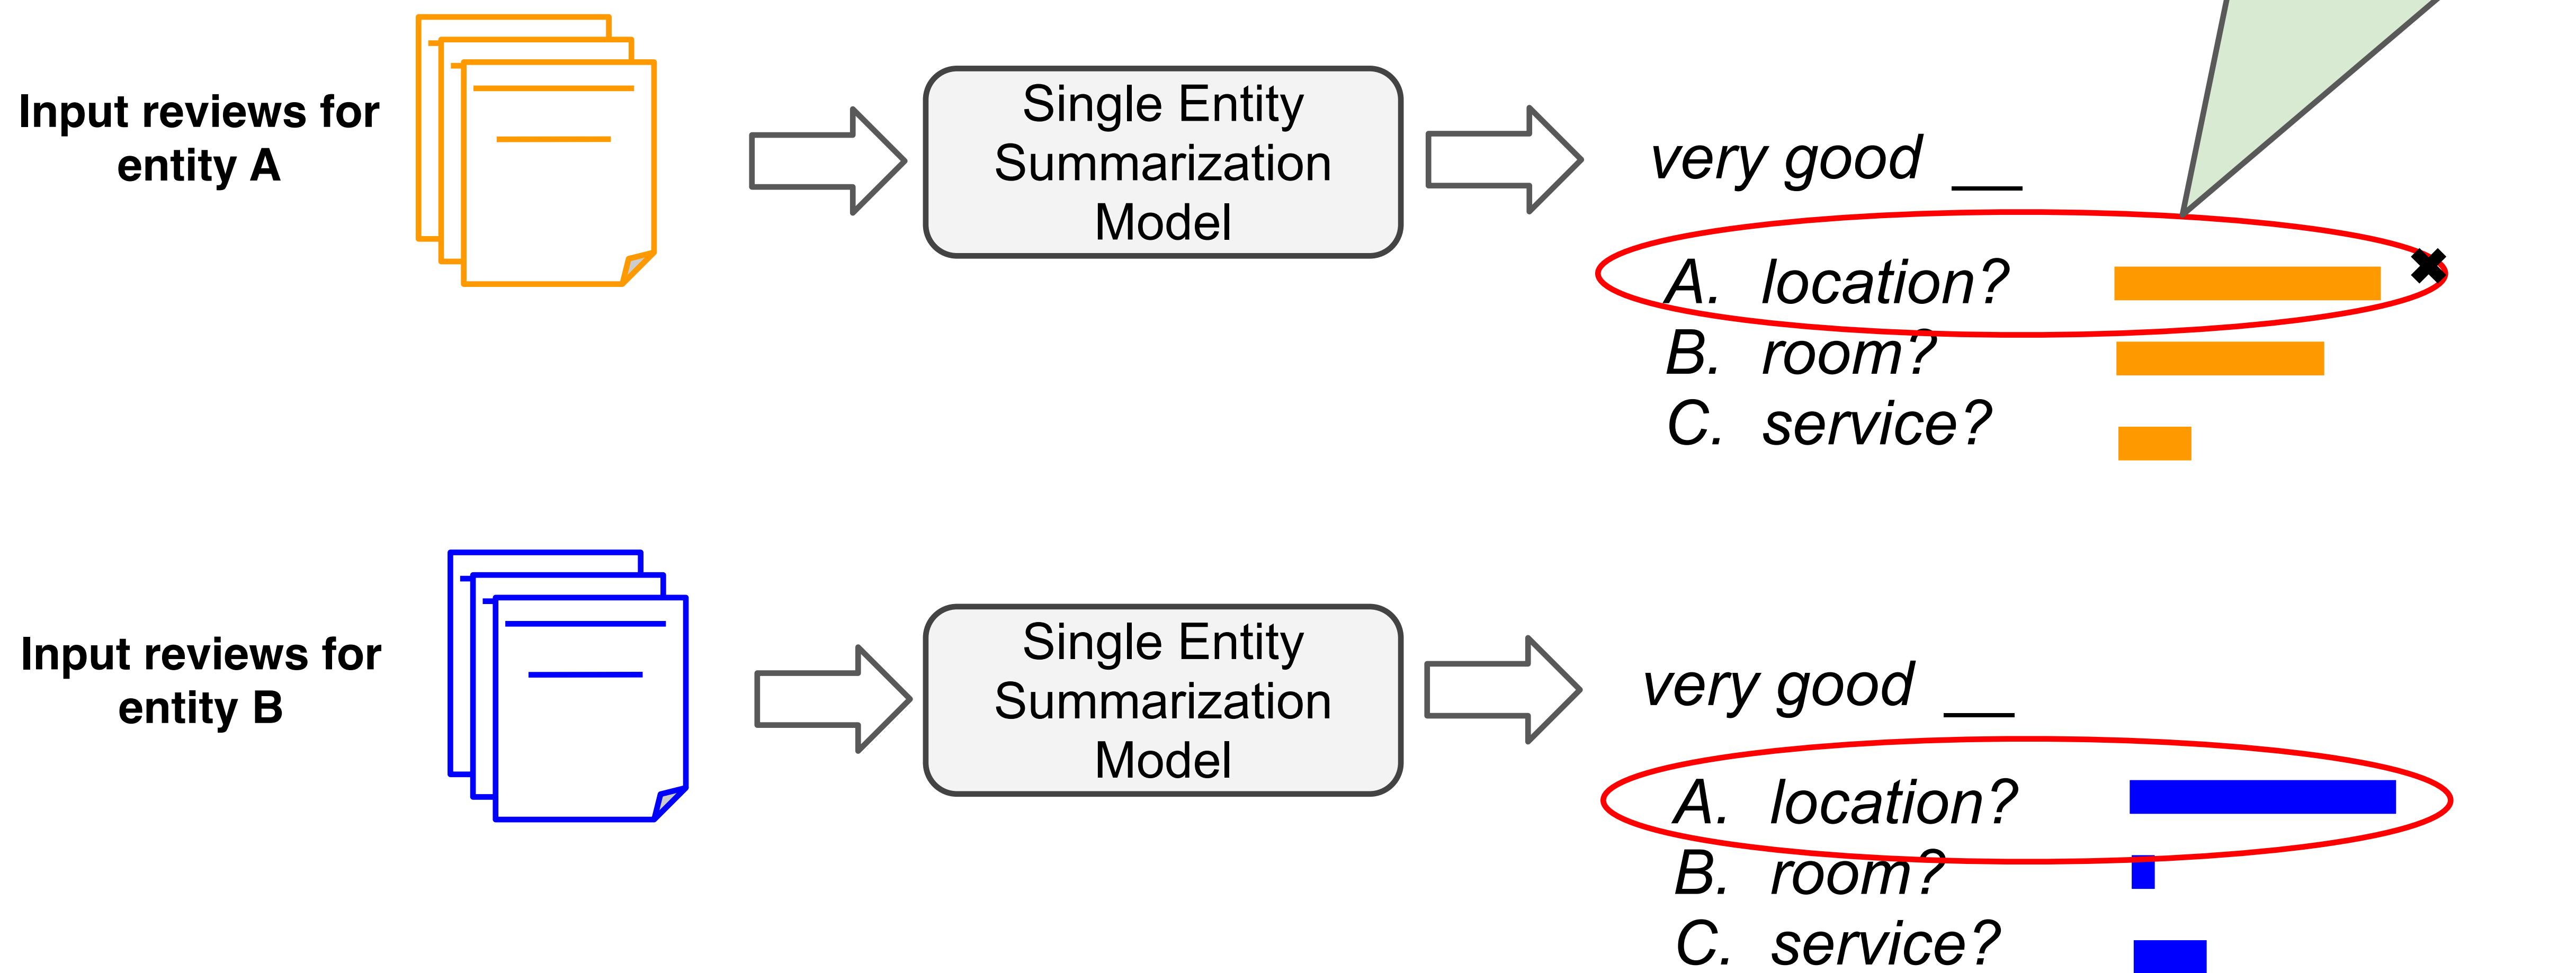

# Use Collaborative-Decoding for summary generation

# Use Collaborative-Decoding for summary generation

# Use Collaborative-Decoding for summarization

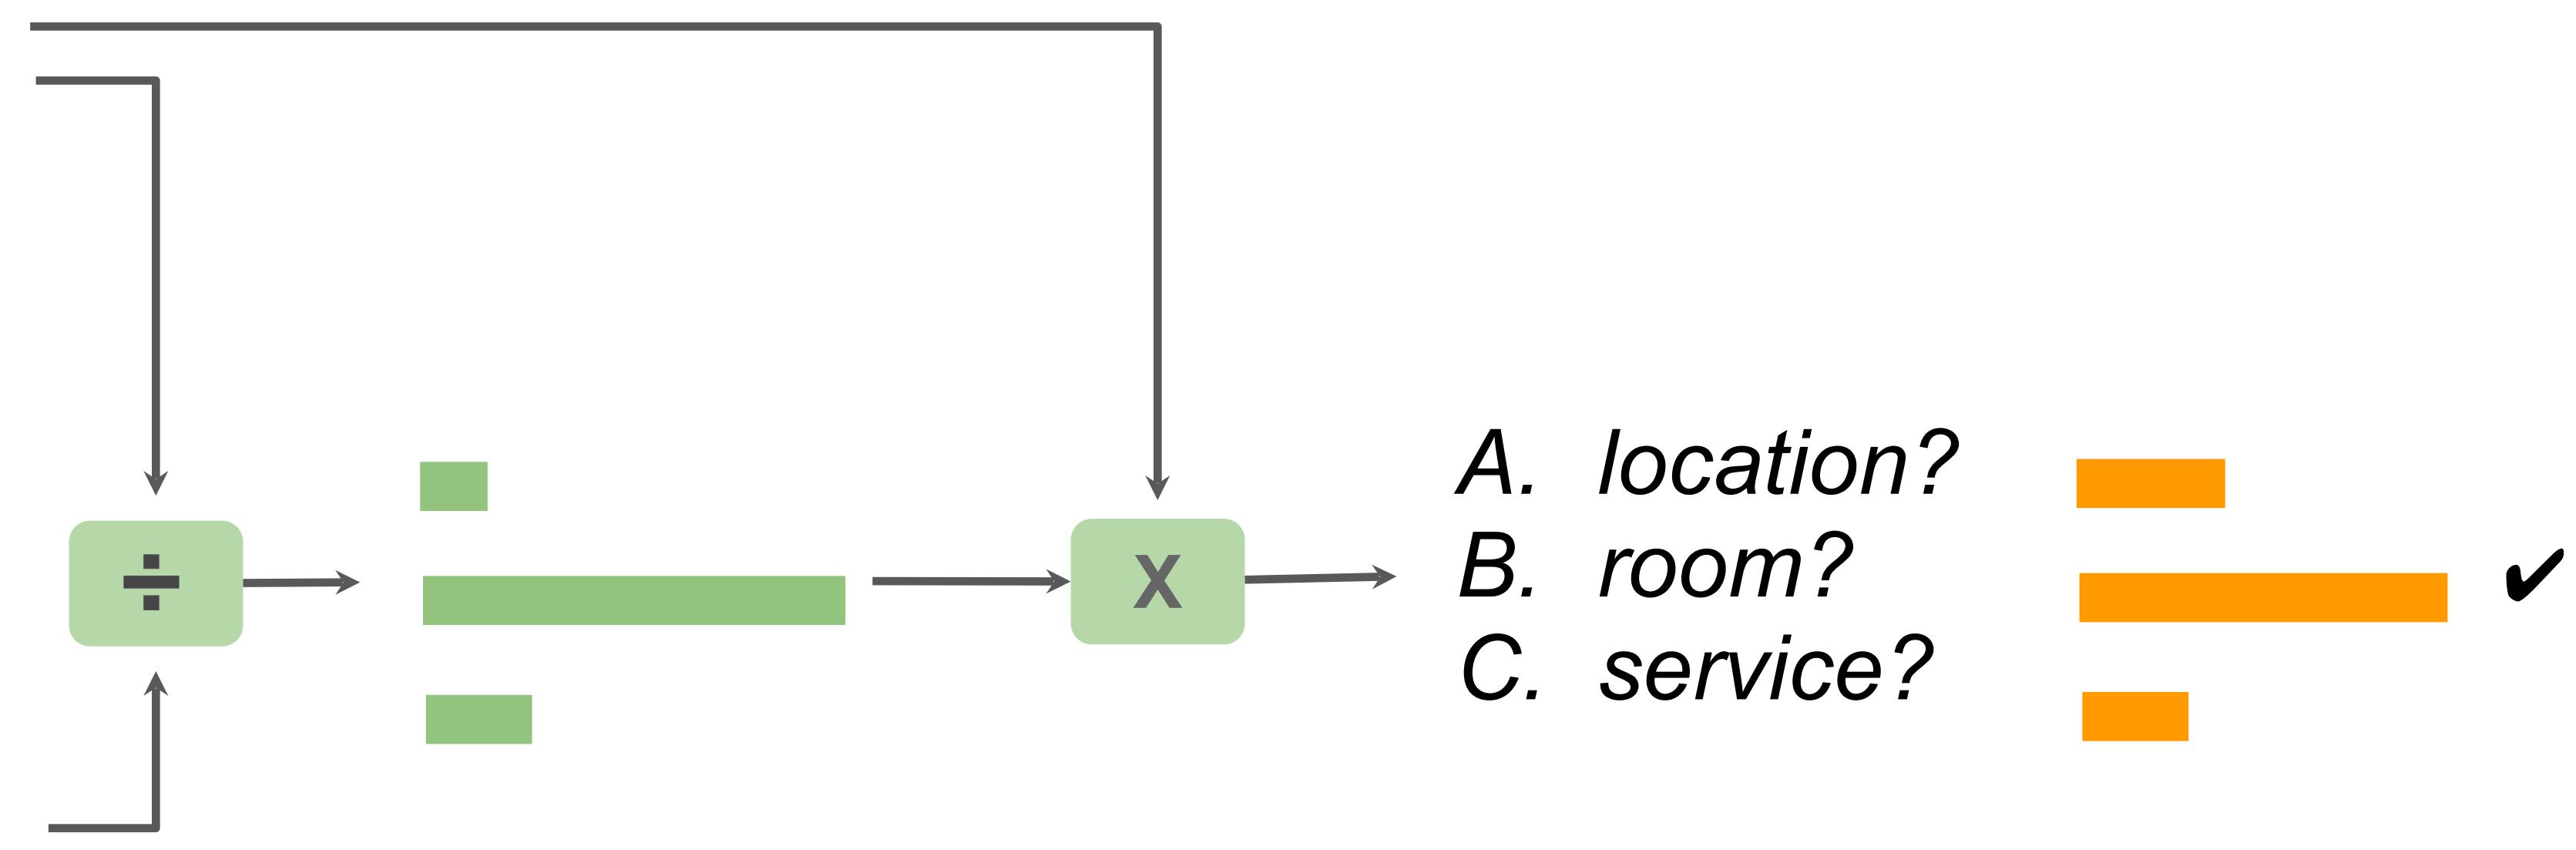

# Use Collaborative-Decoding for summary generation

*very good* \_\_

- A. location? 
- B. room? 
- C. service? 

*very good* \_\_

- A. location? 
- B. room? 
- C. service? 

# Use Collaborative-Decoding for summary generation

- Encourage models to produce contrastive summaries via the decoding step.

Less bad content

*The hotel was available with a deal via the hotel , but there were some issues with the elevator and lines were a bit plain. Overall this is a perfect hotel for solo stays in Rome and not far from Campiano Airport. The rooms in the hotel are not huge but comfortable and clean. The bathrooms are gorgeous and the rooms make the day extra special. The hotel upgraded rooms to have Boschari toiletries on the bed each day. The elevator was a bit plain and the lines were too lines. The hotel staff are always courteous and helpful. Every member of staff have loads of great advice and recommendations for local attractions and sight-seeing. The hotel provides a good size buffet and on roof top garden you can enjoy a nice shower.*

# Dataset & Code are available!

<https://github.com/megagonlabs/cocosum>

# Takeaways

- Autoencoder is a great model to build an opinion summarizer but keep in mind to choose a “good” summary vector
- Collaborative-Decoding is an inference time decoding algorithm that encourages generating more distinctive summaries
